THE SHED

VISUAL IDENTITY GUIDELINES

INTRODUCTION

The development of The Shed's visual identity began in 2016 with the commission of a new work by Lawrence Weiner. Since the 1960s, Weiner has used everyday language as his material to make what he refers to as "specific objects that have no specific form"—artworks that are physical objects, installations, or ideas that can be realized by anyone.

The work he produced for The Shed, titled *IN FRONT OF ITSELF*, would ultimately be installed in the building's public plaza, become the institution's logo, and serve as the starting point for a new visual language, the rules of which are outlined in this document.

This visual language is comprised of three main components that follow a simple grammar for how they can be used together: a logo p. 20, a graphic vocabulary of shapes and lines p. 60, and a typeface p. 110. Like all languages, it will evolve over time as new designers learn to use it. New components will appear like slang, and different ways of speaking will be developed in order to reflect the unique vision of each commission. These additions will live alongside earlier ideas and through a collision of new and old will ensure the language is perpetually new.

Lawrence Weiner (born Bronx, NY 1942), *IN FRONT OF ITSELF*, 2019, language + the materials referred to.

Lawrence Weiner's art defies categorization. He places objects in our environment without making sculpture; plays with words without writing poetry; and has made logos, posters, packaging, book covers, tote bags, and typefaces without being a graphic designer. Instead, he draws from these disciplines in a way that blurs the boundaries that typically separate them.

All artists invite viewers to interpret their work, but Lawrence Weiner goes further. By using language, he has said, his art is left "more open for the user. It lets consumers immediately transform it into something they can use in their lives." How these works are realized is always up to the user, and is always in response to contemporary contexts.

When a viewer encounters Lawrence Weiner's work, it is seen in two ways: as FORM and as IDEA. His signature palette of typography and graphic forms deliver messages that read as ideas for sculptures that can be endlessly interpreted by new users.*

If Lawrence Weiner's work can be understood in this way, as prompts or instructions for potential sculptures, what does *IN FRONT OF ITSELF* suggest? And how can the process of interpretation and participation in his work lead to a unique visual language for The Shed?

* For example, in three different works—*ONE QUART EXTERIOR GREEN INDUSTRIAL ENAMEL THROWN ON A BRICK WALL* (1968), *DUST & WATER PUT SOMEWHERE BETWEEN THE SKY AND THE EARTH* (1990), and *BITS & PIECES PUT TOGETHER TO PRESENT A SEMBLANCE OF A WHOLE* (1991)—Lawrence Weiner suggests how different materials (green enamel, dust and water, sky and earth, bits and pieces) can be thrown, put somewhere, or put together to make a work of art.

THE SHED was removed from the work when it was installed in the building's public plaza, perhaps to avoid the redundancy of naming the thing that sat directly behind or on top of itself. It became the institution's logo, and served as our starting point for unpacking the choices Lawrence Weiner makes in his work in order to develop a new visual language that translates his ideas for a contemporary context.

IN FRONT OF ITSELF becomes a prompt that generates a range of design decisions that dictate how the components of this visual language work together.

Liz Diller, The Shed's lead architect, said she couldn't know what kind of building the art of the future would need, just that it would require flexible infrastructure. Similarly, we cannot know how The Shed's visual identity will evolve, only that it will and that it should. These guidelines aim to explain how this can happen, and provide some examples of how the identity has been explored so far.

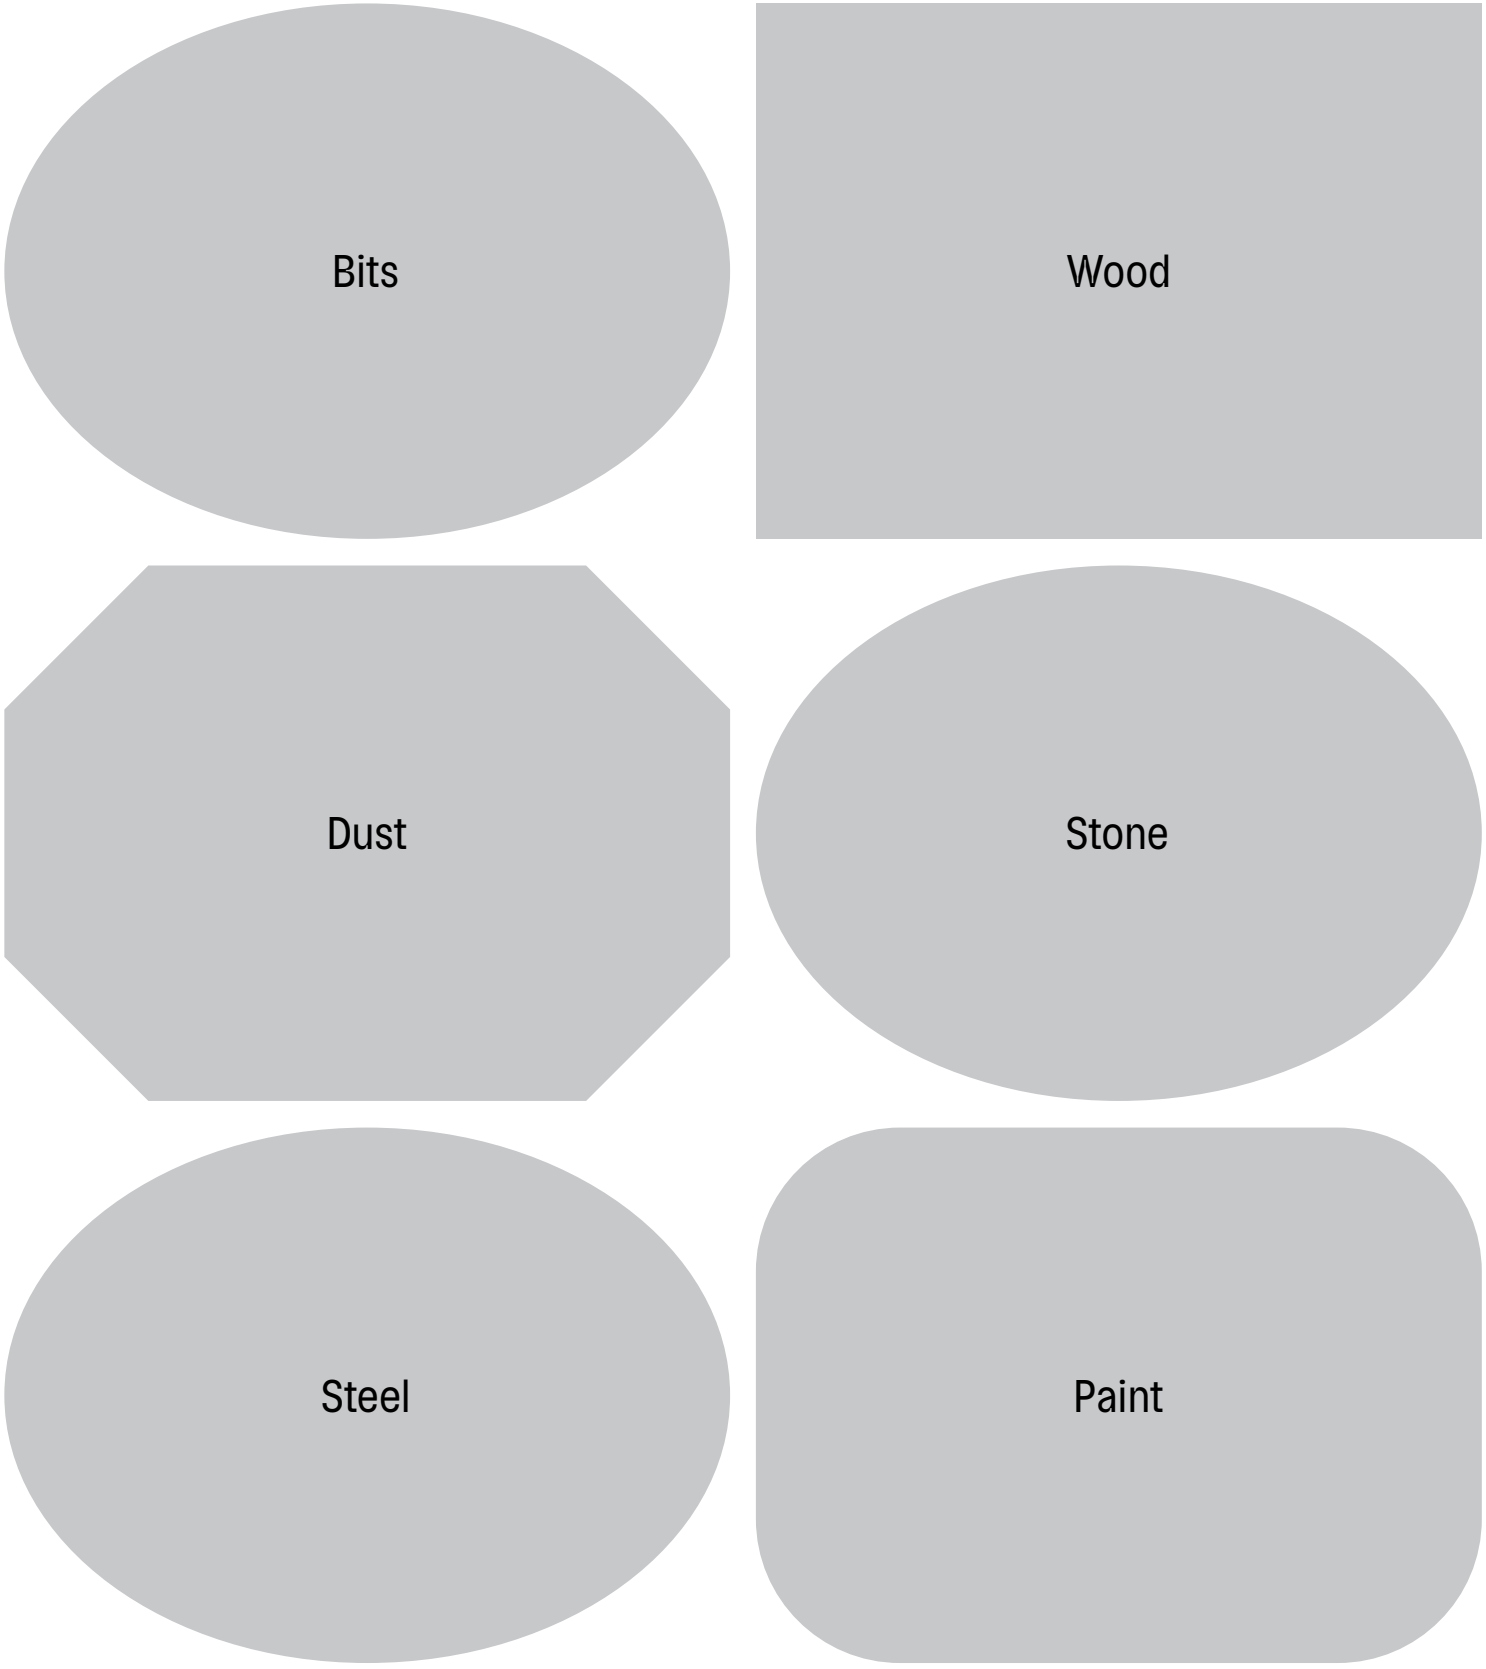

IN FRONT OF ITSELF

The Shed's first visual arts commission by the artist Lawrence Weiner is the starting point for the The Shed's visual identity.

About 13

Design Strategy 16
- **Movement**
- **Stacking** 17
- **Layering** 18
- **Depth & Dimensionality**

The medium typically attributed to Lawrence Weiner's work is "language and the materials referred to." These materials are nouns, the kinds of everyday things you'd find in a shed:

With *IN FRONT OF ITSELF*, the material is The Shed itself: the building, the artists and artworks, and the institution's mission and program.

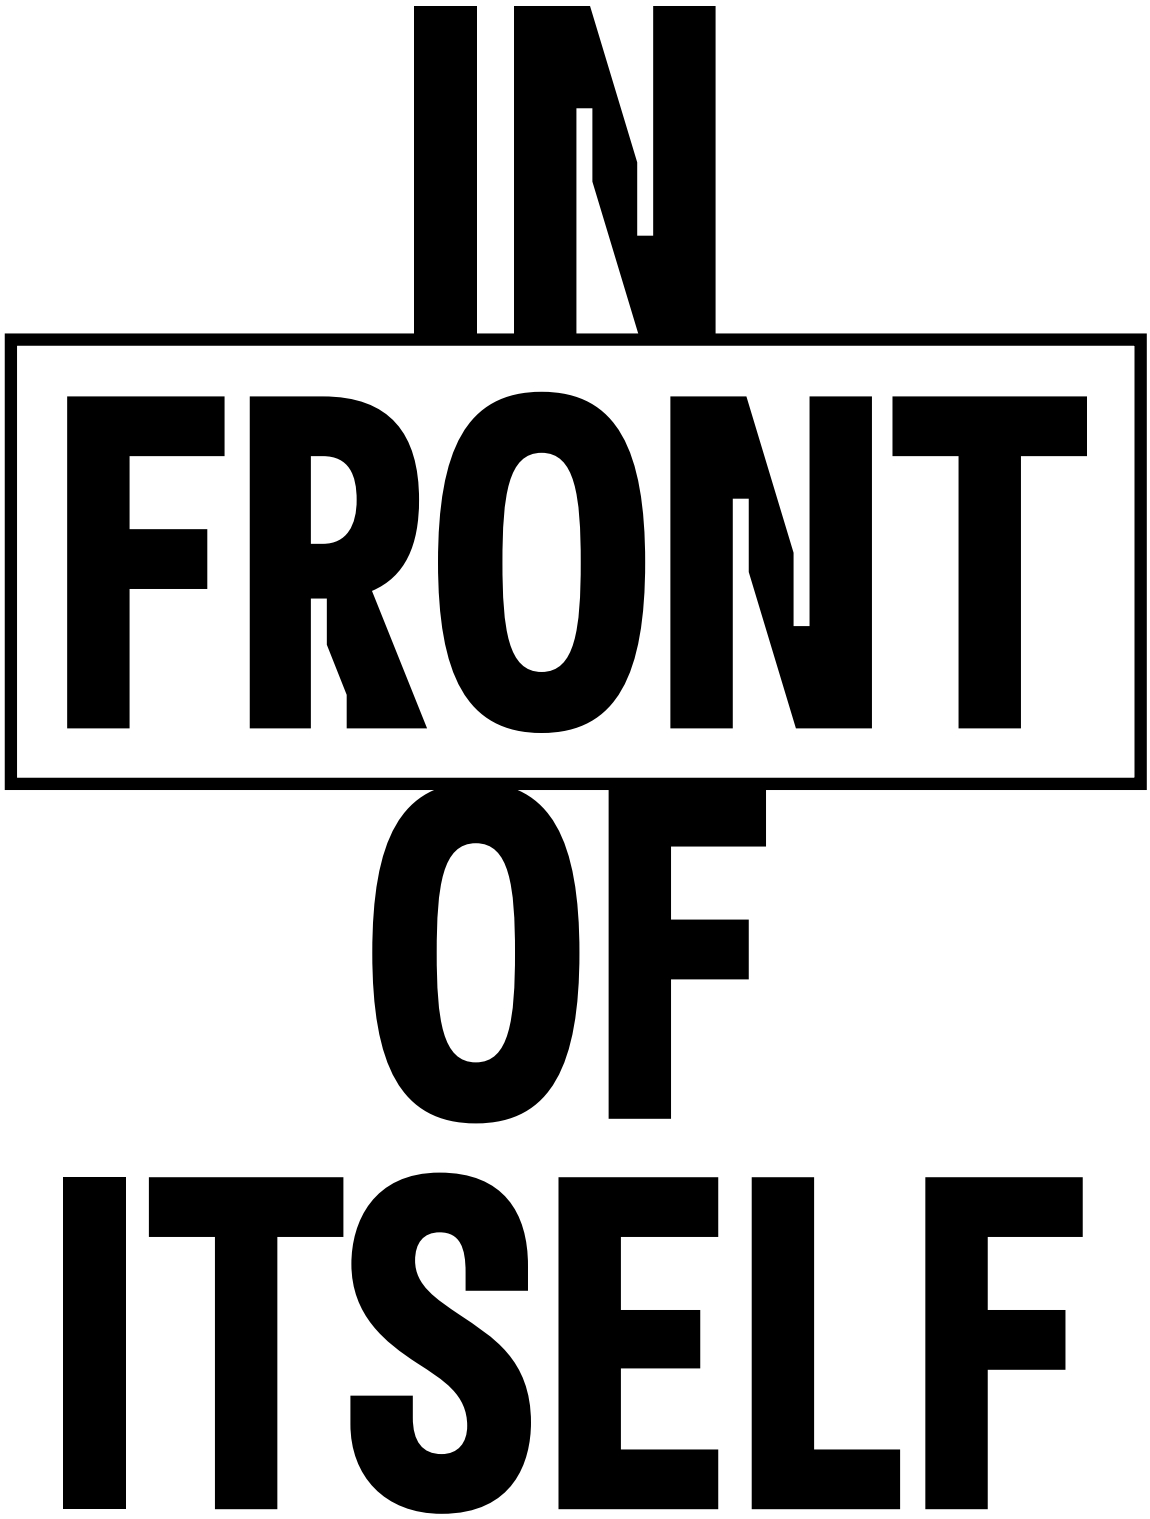

IN FRONT OF ITSELF suggests The Shed's ability to move back and forth on its rails, its mission to always look towards the future and provoke artists and audiences to make and see what's next, the industrial history of The Shed's site, and the energy caused by the collision of new and old in a city constantly remaking itself. It also serves as a reminder for a new institution not to get ahead of itself.

As a strategy for The Shed's visual identity, *IN FRONT OF ITSELF* informs a variety of design decisions that can be used on their own or combined to express The Shed's mission to be an expansive and maximal institution.

"In front of itself" suggests **movement:**

Restrictions 39

The Shed's logo is typeset Margaret Seaworthy Gothic (MSG), a typeface Lawrence Weiner designed that has become synonymous with his work (see more about typography on p. 110). He uses it in one of three ways: solid, outlined, or solid with an outline.

Lawrence Weiner chose the outlined version of MSG for The Shed because it suggested an open frame and a container waiting to be filled. This wasn't only an allusion to The Shed being a venue for artists to present their work, but also to the fact that their mission had yet to be proven, an idea he underlined in a speech at the building's ground breaking ceremony: "The entire idea of The Shed, to me, is that it's not a parallel reality of New York City. It's a simultaneous reality. And it's going to have to have no definition, until it by itself, and its presence, defines itself."

The Shed's logo is an artwork by Lawrence Weiner that reflects the openness and potential of the institution, and the act of presenting artists and their ideas. It is enclosed by a frame that represents the building's moveable outer shell, that can expand beyond the logo to enclose and highlight information and images p. 60. This frame, and its behavior, forms the basis of The Shed's visual identity.

Restrictions 93

Frames, lines, and shapes are common elements in Lawrence Weiner's work, where they are paired with typography to create hierarchy, reveal the structure of a text, and turn language into objects.* They come from the same vernacular as the language and industrial typography Weiner uses in his work. In signage, tabloid headlines, and advertisements, these enclosures are used for the same purposes he uses them—to call attention and organize information.

* See Roland Wäspe, "Sequences," published in *From point to point. Von Punkt zu Punkt. Kunstverein Kunstmuseum St. Gallen 20. Mai–20. August 1995.* (p. 50): "In many cases [Lawrence Weiner's] texts are enclosed by a line and connected with visually effective symbols like parentheses, plus signs and ampersands. The artist characterizes these therefore as sculptures. The reactions between the image-oriented elements and their apparent linguistic structure lead the viewer directly to the heart of the work.

Typographic vernacular of New York City.
William Klein, *5-D Gas, New York, United States*, 1955.

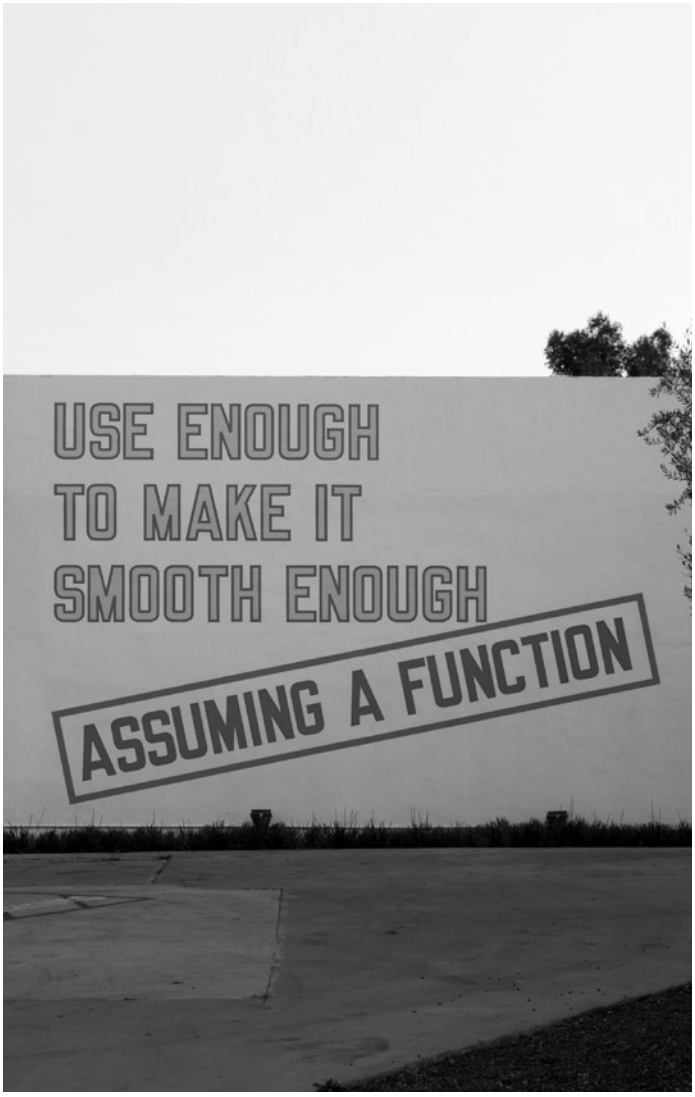

Lawrence Weiner, *BITS & PIECES PUT TOGETHER TO PRESENT A SEMBLANCE OF A WHOLE*, 1991, anodized aluminum installed dimensions variable. Installed at the Walker Art Center, Minneapolis, MN.

Lines connect, create hierarchy, and add expressions of meaning to the language in his work. Usually they are graphic and abstract, but sometimes—especially in his drawings and when he is commissioned to design a poster or object—the lines function as illustrations that depict the ideas or materials referenced in the text.

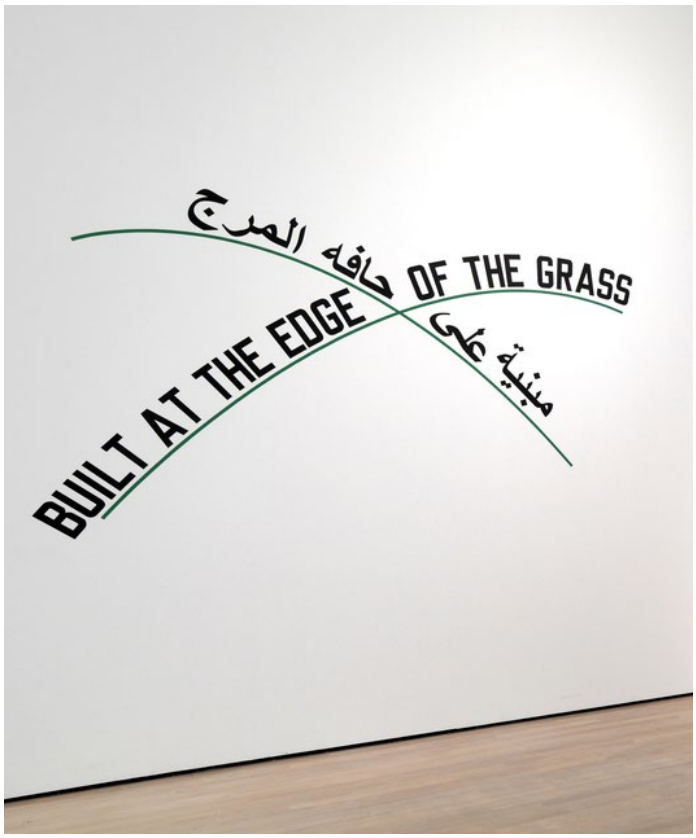

The use of enclosures in The Shed's visual identity started with what seemed like an obvious idea: to use the rectangle enclosing the logo to illustrate the movement of the building. From there, shapes and lines became an essential component of the visual language, expanding from the logo to enclose text and image. They do this in two ways: as INFRASTRUCTURE and as ILLUSTRATION.

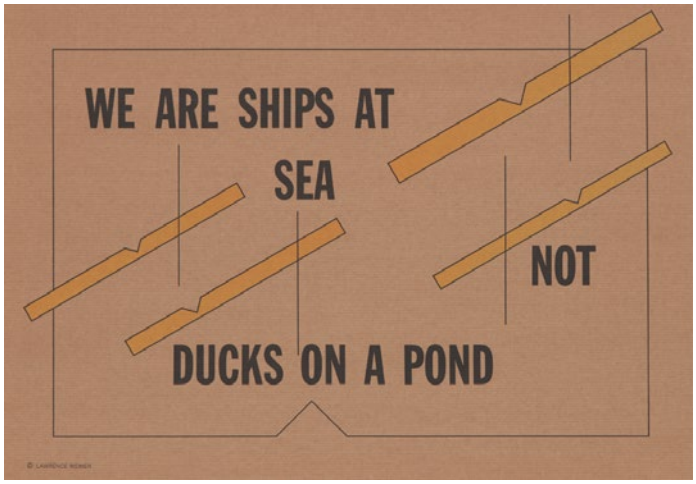

Infrastructure is the use of lines to create or reveal the typographic hierarchy of a given piece. For example: underlining or framing important words or phrases, separating blocks of text and images, dividing space, creating forms.

The Shed was designed so the spaces and their infrastructure (lighting, sound, walls, etc.) can adapt to the needs of artists producing ambitious new works. Similarly, the use of lines and frames in The Shed's visual identity doesn't respond to a prescribed use of space. Instead, it highlights the structures and compositions needed for each application. Unlike the way lines are traditionally used to divide space and reveal a grid in typography, this identity encourages a more maximalist approach. Lines can be used for function *and* decoration. They are meant to express ideas, energy, and movement, just as much as they organize information.

Lawrence Weiner, *USE ENOUGH TO MAKE IT SMOOTH ENOUGH ASSUMING A FUNCTION*, 2008. Language + the materials referred to. Dimensions variable.

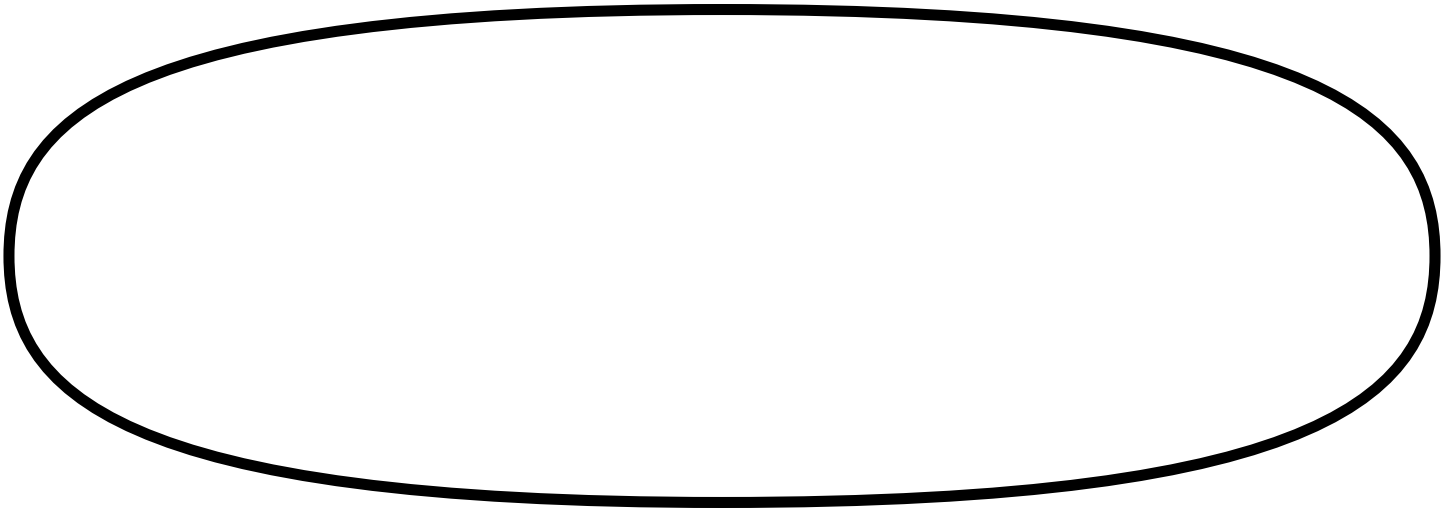

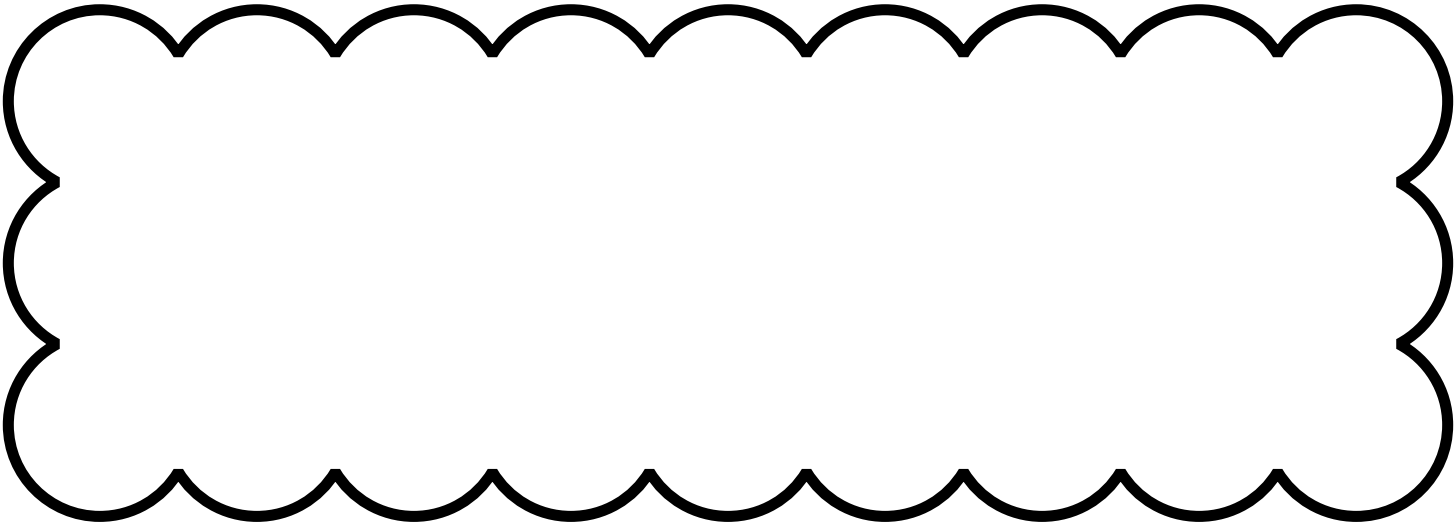

Lawrence Weiner, *BUILT AT THE EDGE OF THE GRASS*, 2006. Language+the materials referred to. The color, shape, and gesture of the lines in this work illustrate text.

Rectangles are the standard enclosures in The Shed's visual language. Ovals, rounded rectangles, and more expressive shapes can be used to reflect themes of a specific program, season, or application.

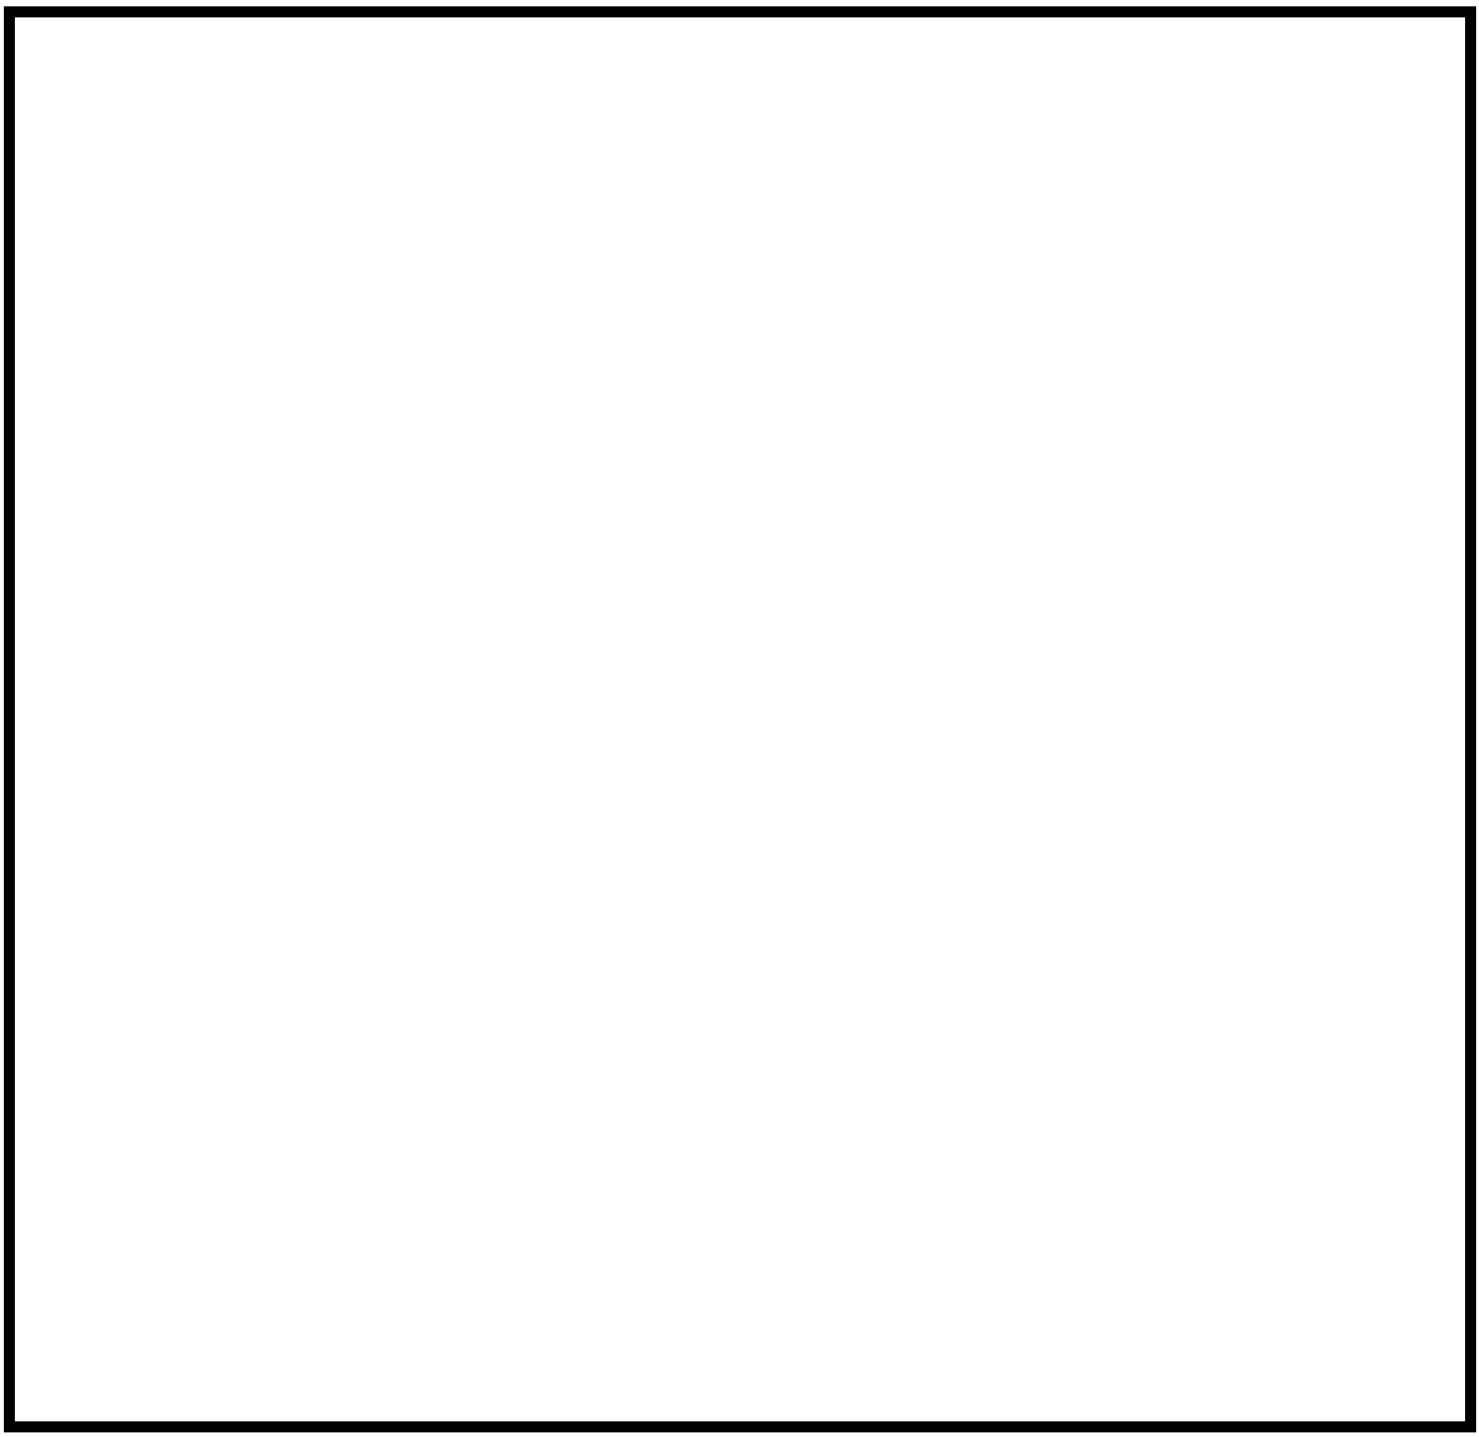

Shapes are typically used to enclose—and therefore call attention to—specific words, phrases, or images. They can also be used to gather and organize a wide range of information such as credits and sponsor logos. (See typography and Usage p. 110.) Conceptually, this usage can be understood as the frame around The Shed's logo leaving (deploying) to call attention to something else.

Lines are typically used to frame or divide space on an application, setting up a structure and hierarchy for more complicated displays of information.

ILLUSTRATION is when a shape, enclosure, or type of movement quality in animation communicates a specific idea or theme. For example, a dashed line is used for The Shed's *Open Call* program, suggesting an opening up of the institution. Round shapes can convey pop, where angular shapes are more urgent and dynamic. For *Soundtrack of America*, a program tracing the family tree of African American music, shapes resembling picture frames were used and arranged to display images of each performer. Lines are also used in The Shed's visual identity to illustrate icons, arrows, and maps.

Over the course of his career, Lawrence Weiner expanded his visual vocabulary beyond rectangles, circles, plus signs, and brackets to include squiggly lines, gestural arrows, and shapes that invert when they overlap. Because they have become as synonymous with his work as his typography, anything resembling these forms should be avoided on The Shed's design materials.

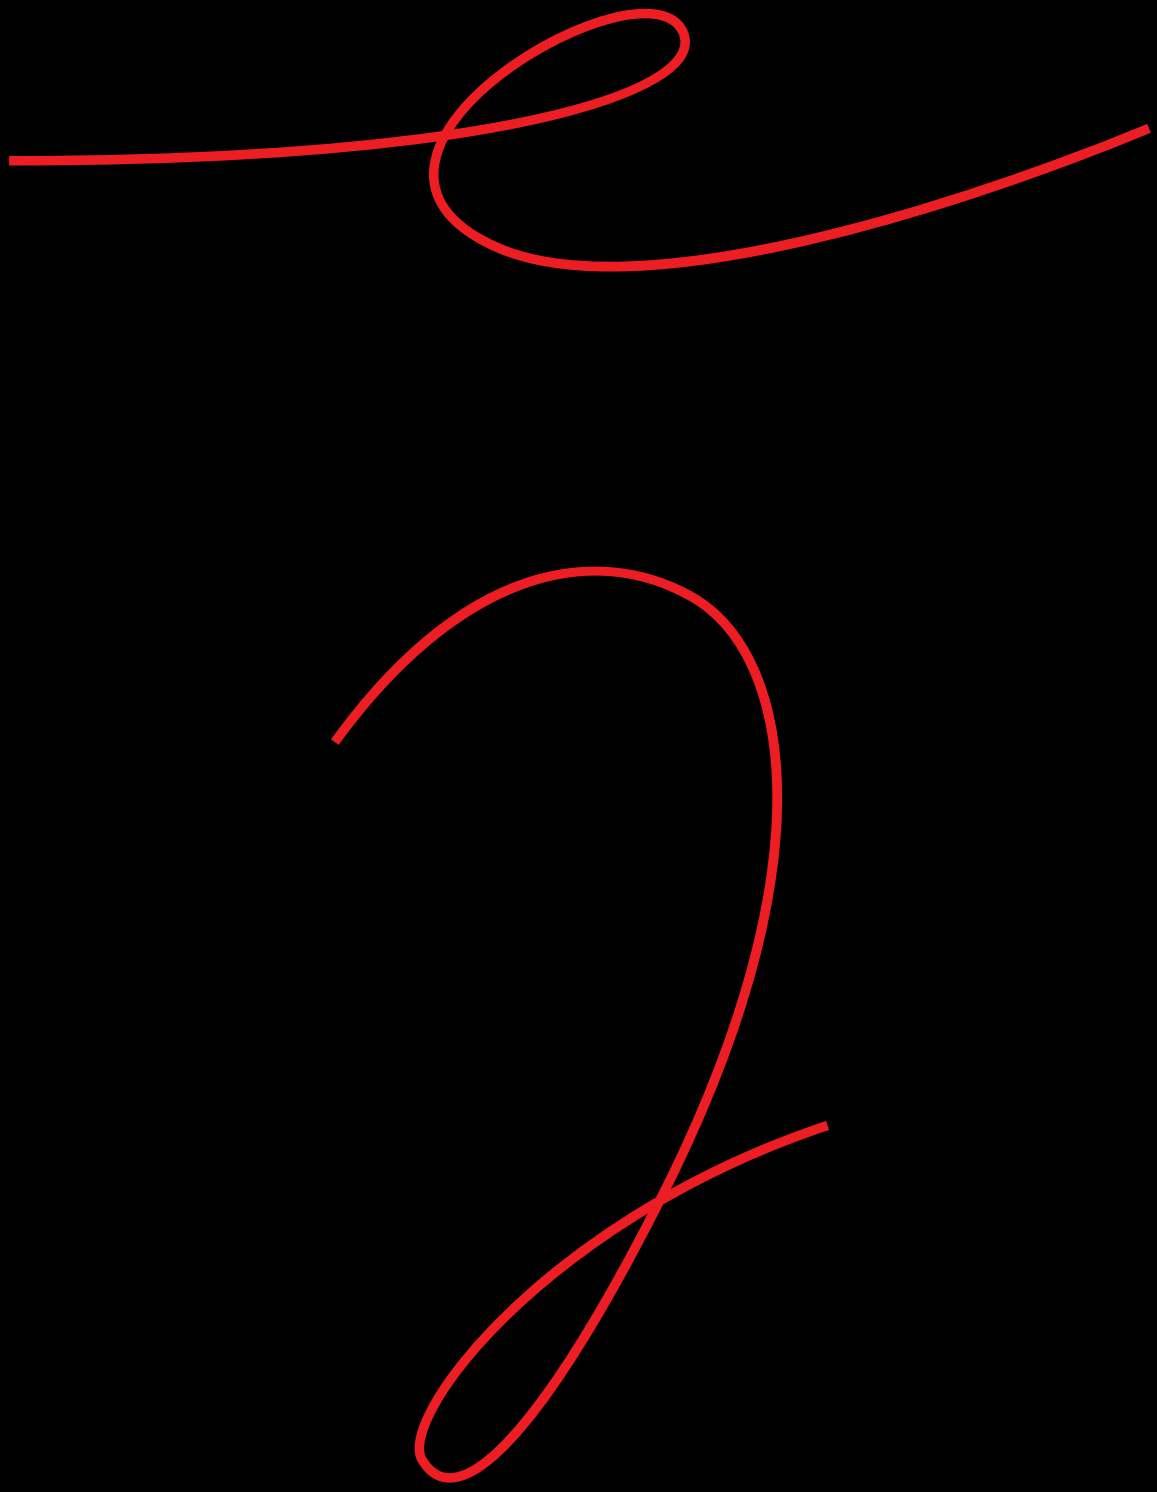

The Shed's visual identity identity exists somewhere between appropriation, translation, and parody of Lawrence Weiner's work. In order to stay in that gray area we must avoid anything that looks too close to his specific visual vernacular.

Avoid using iconic Lawrence Weiner shapes and lines.

Gordon Matta-Clark's photographs of graffiti from the South Bronx in the early 1970s capture the fleeting names and messages that covered the city's walls and trains at the time. These unsanctioned messages mixed with and covered up advertisements, public notices, and other types of language that was fighting for the attention of people passing by. Lawrence Weiner was drawn to these walls and their potential as venues as temporary public messaging.

Gordon Matta-Clark, *Graffiti*, 1973.

“I grew up in a city where I read the walls. I love to put work of mine out on the walls and let people read it. Some will remember it and then somebody else comes along and puts something else over it. It becomes archaeology rather than history.”*

In Lawrence Weiner’s early works, text was applied with spray paint, stencils, and vinyl letters—materials that could be found walking around a hardware store. He chose these in order to blend in with the messages filling the city streets.

Lawrence Weiner’s approach to typography has always been in service to a more open, everyday, anti-hierarchical method of communication. His texts are set exclusively in capital letters to counter the authority of proper capitalization, and to invert the Modernist preference for lowercase. He avoids serif typefaces and has a disdain for Helvetica for their associations with authority and corporate culture.

* Lawrence Weiner, interview with Benjamin Buchloch in Lawrence Weiner, Alexander Alberro and Alice Zimmerman, eds. New York: Phaidon: 1998.

As his work evolved, Weiner's method shifted from what was essentially handwriting to typography. Unlike handwriting—which is gestural, unique, and ephemeral—typography is mechanical, general, and infinitely reproducible. It can be fabricated anywhere, by anyone with access to his fonts and instructions, without quality or consistency suffering. In this way, his work functions much like a global brand identity. In this shift, Weiner went from using industrial methods to using typefaces that conveyed, and exaggerated, the *idea* of industry.

Lawrence Weiner has said that using language allows the work to be more flexible. "It leaves it more open for the user. It lets consumers immediately transform it into something they can use in their lives." He is producing work with the knowledge that it will be received, interpreted, and ultimately produced by viewers on their own terms and in response to their environment. He encourages this to happen, and by speaking about materials in generalized terms he has ensured his work will remain open in the future. Language "doesn't carry with it what a stone looked like in 1927. So that if a work has any kind of shelf life and it's picked up by another generation, that generation does not have to accept any of the moral prerogatives or any of the value structures in order to be able to use it." Weiner understands that all forms of culture are received and appropriated in this way, but that specificity prevents them from reaching future audiences. Typography, however, cannot be easily genericized and he has become (ironically) so associated with these typefaces—specifically Franklin Gothic, which he stopped using because it had become so closely aligned with his work—that they have a similar effect as describing a particular stone. Helvetica is the closest we have to a generic, ubiquitous font, but Weiner's disdain for it has prevented him from using it. Perhaps the most effective way to ensure his work remains open to future generations is to always use new typefaces that allow the work to constantly evolve by speaking in the visual language of each decade.

Franklin Gothic Extra Condensed

FF Offline

Margaret Seaworthy Gothic

Franklin Gothic, the typeface most associated with Weiner's earlier work, was commonly available as vinyl letters, stencils, and for moveable and photo typesetting machines. It would have been a regular feature in the everyday typographic vernacular, appearing in signage, newspaper headlines, advertisements. It was a perfect foil for Helvetica, a typeface Weiner sees as authoritative and corporate, and that he accuses of conveying the false sense of optimism he associates with Modernism in general.*

Eventually, Weiner's typographic palette expanded to include FF Offline, a font that exaggerates the functional requirements of a stencil to the point of parody, and Margaret Seaworthy Gothic, his own typeface that recalls readily available signage kits with click on letters for menu boards, stencils, and sign painter templates. MSG is constructed from a limited set of lines and curves, a design detail that would have made casting or cutting letters more efficient in production, and conveys its industrial past when used in his work (and in The Shed's logo).

Shed Heavy Display (left) shows no traces of the hand-drawn forms of Franklin Gothic (right).

* "I don't like Helvetica. It stands for a kind of modernism that I don't believe in. It stands for an optimism that led us into World War II." Interview with Jonas Ekberg, 'Siksi' (Helsinki), no. 1, 1995. Re-published in *HAVING BEEN SAID: Writings & Interviews of Lawrence Weiner 1963–2003*.

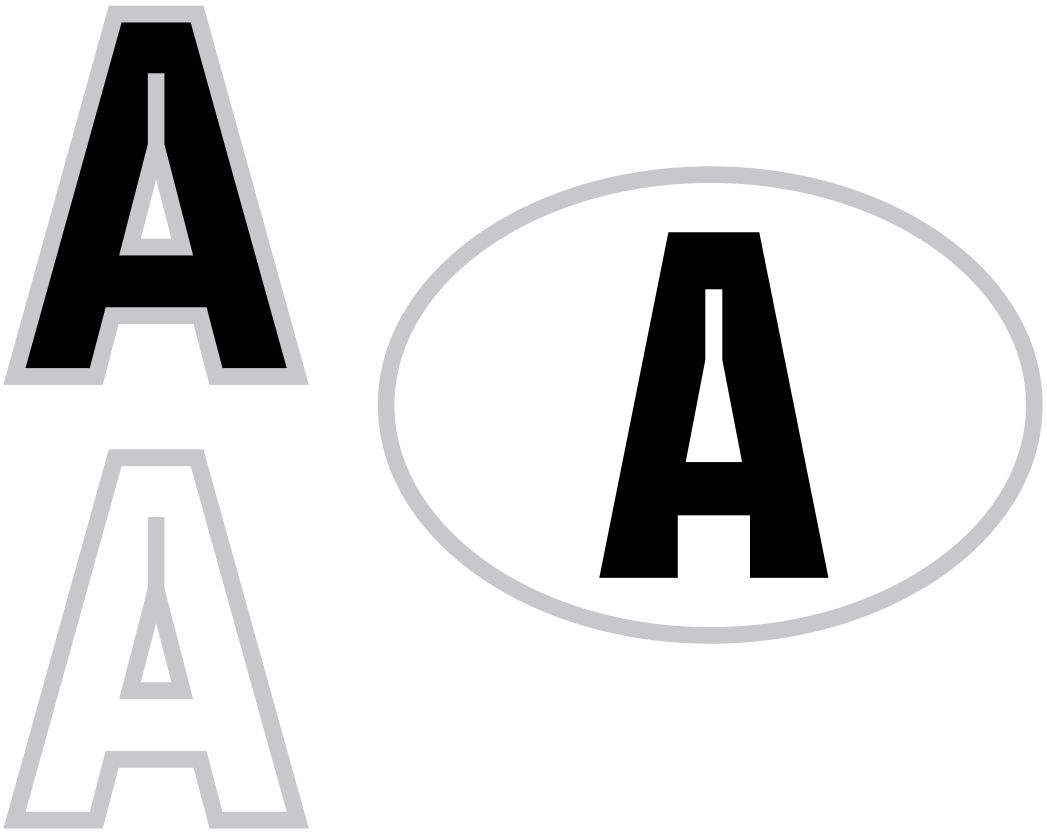

Everyday Typography: Shed Heavy Display (bottom) with Franklin Gothic, FF Offline, and Margaret Seaworthy Gothic.

A new typeface was commissioned for The Shed's visual identity that continues the trajectory of Lawrence Weiner's typography. In the same way that Margaret Seaworthy Gothic and FF Offline exaggerate the vernacular they derive from, and Franklin Gothic demonstrates the meeting of hand-drawn letterforms and industrial production, The Shed's typeface (designed by Kasper Pyndt Rasmussen) takes full advantage of the digital tools that created it.

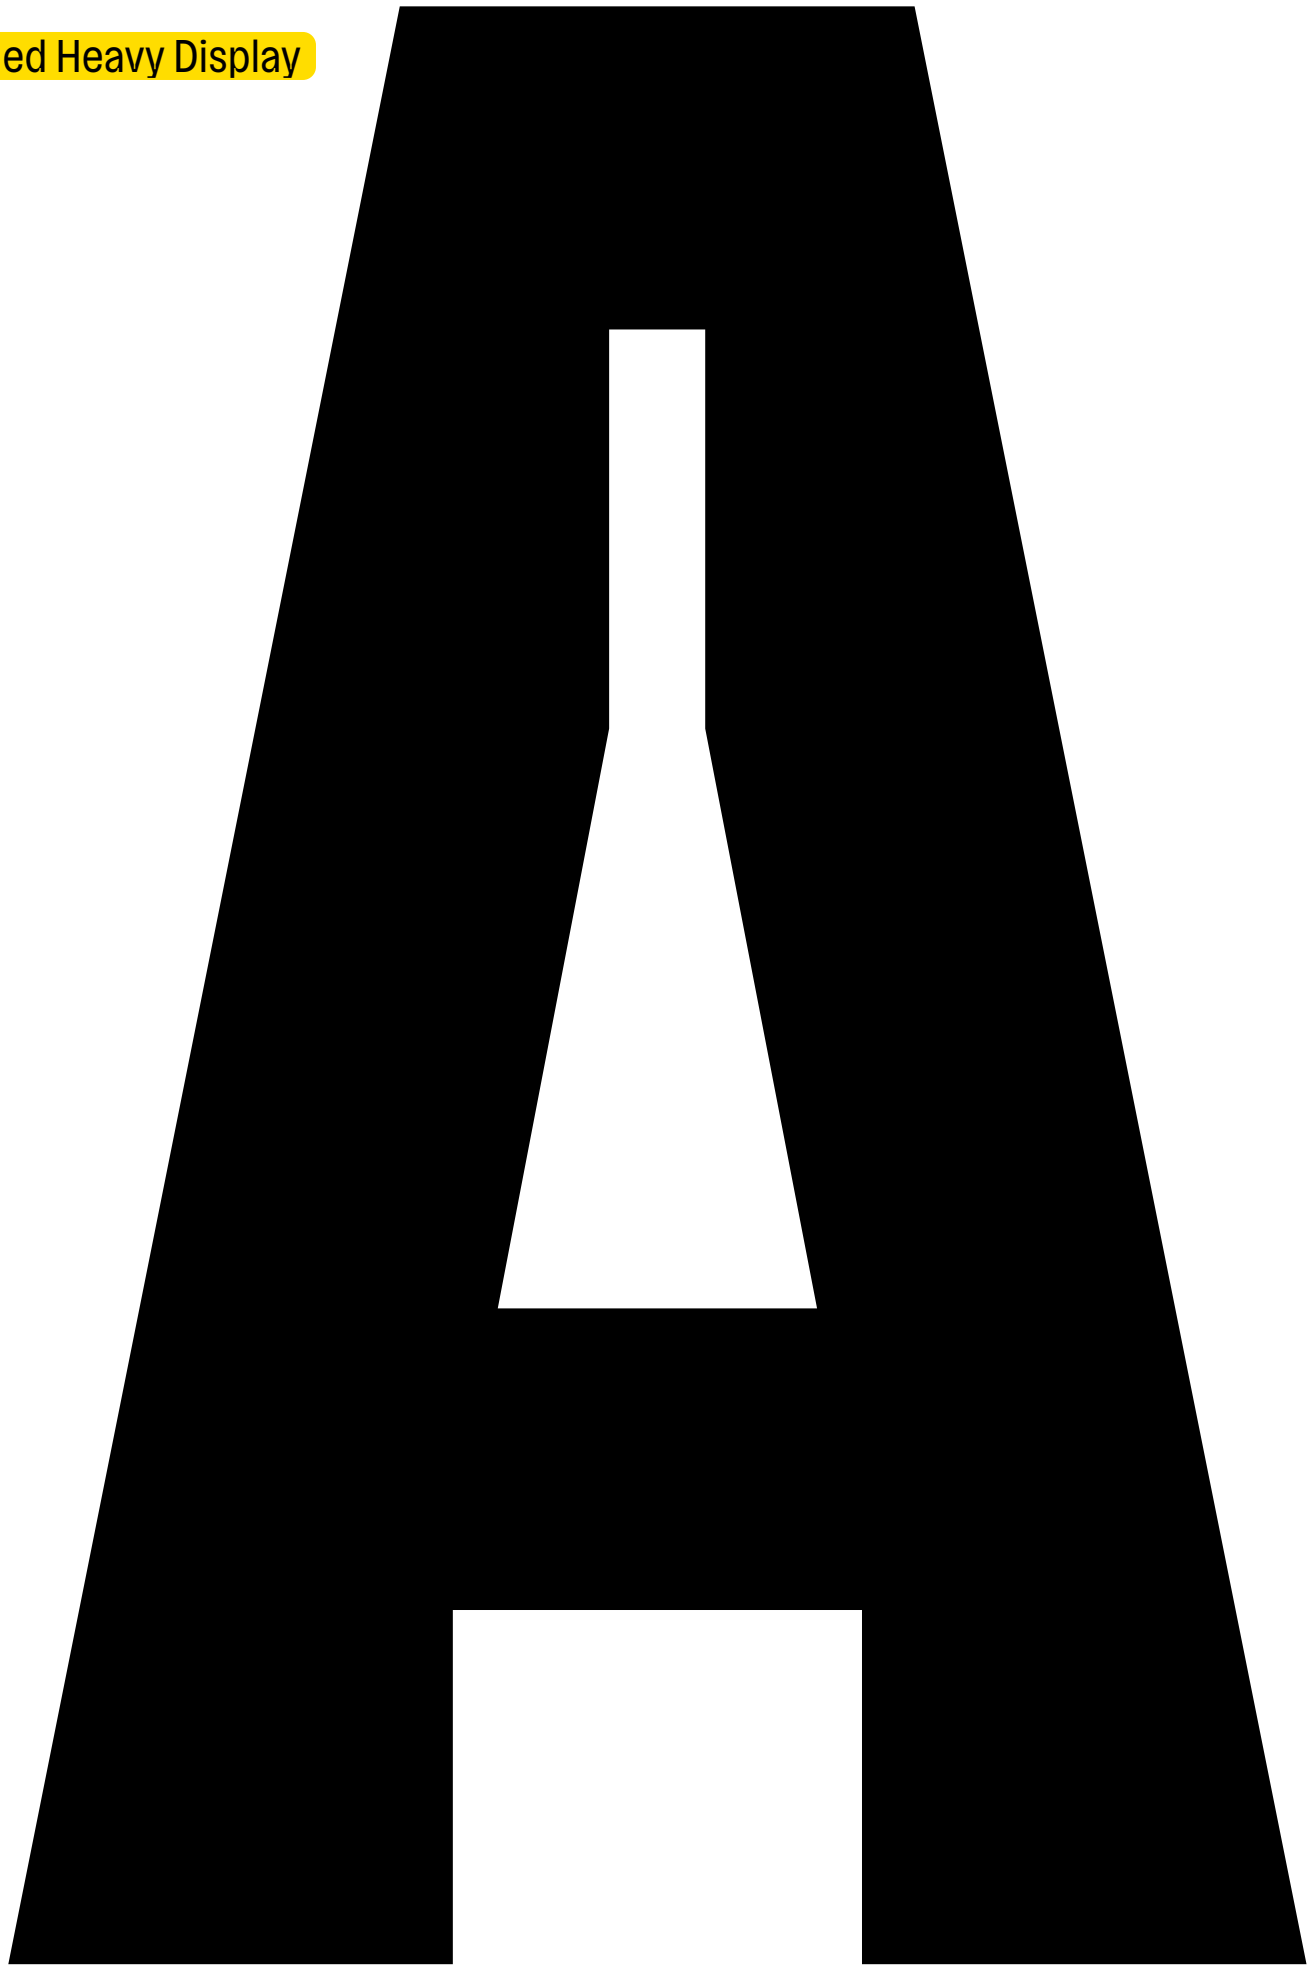

If Weiner's typography recalls the industrial vernacular of a previous era, The Shed's typeface feels distinctly of our time. However, by matching the weight and proportions Shed feels right at home next to Weiner's typefaces, especially Franklin Gothic and Margaret Seaworthy Gothic.

The most identifiable feature of this typeface are its prominent ink traps—a functional device that ensures proper fidelity when text is printed at small sizes. In the display weight of The Shed's typeface, they are an anachronistic detail that veers toward parody, and recall Weiner's interest in industrial, everyday typography.

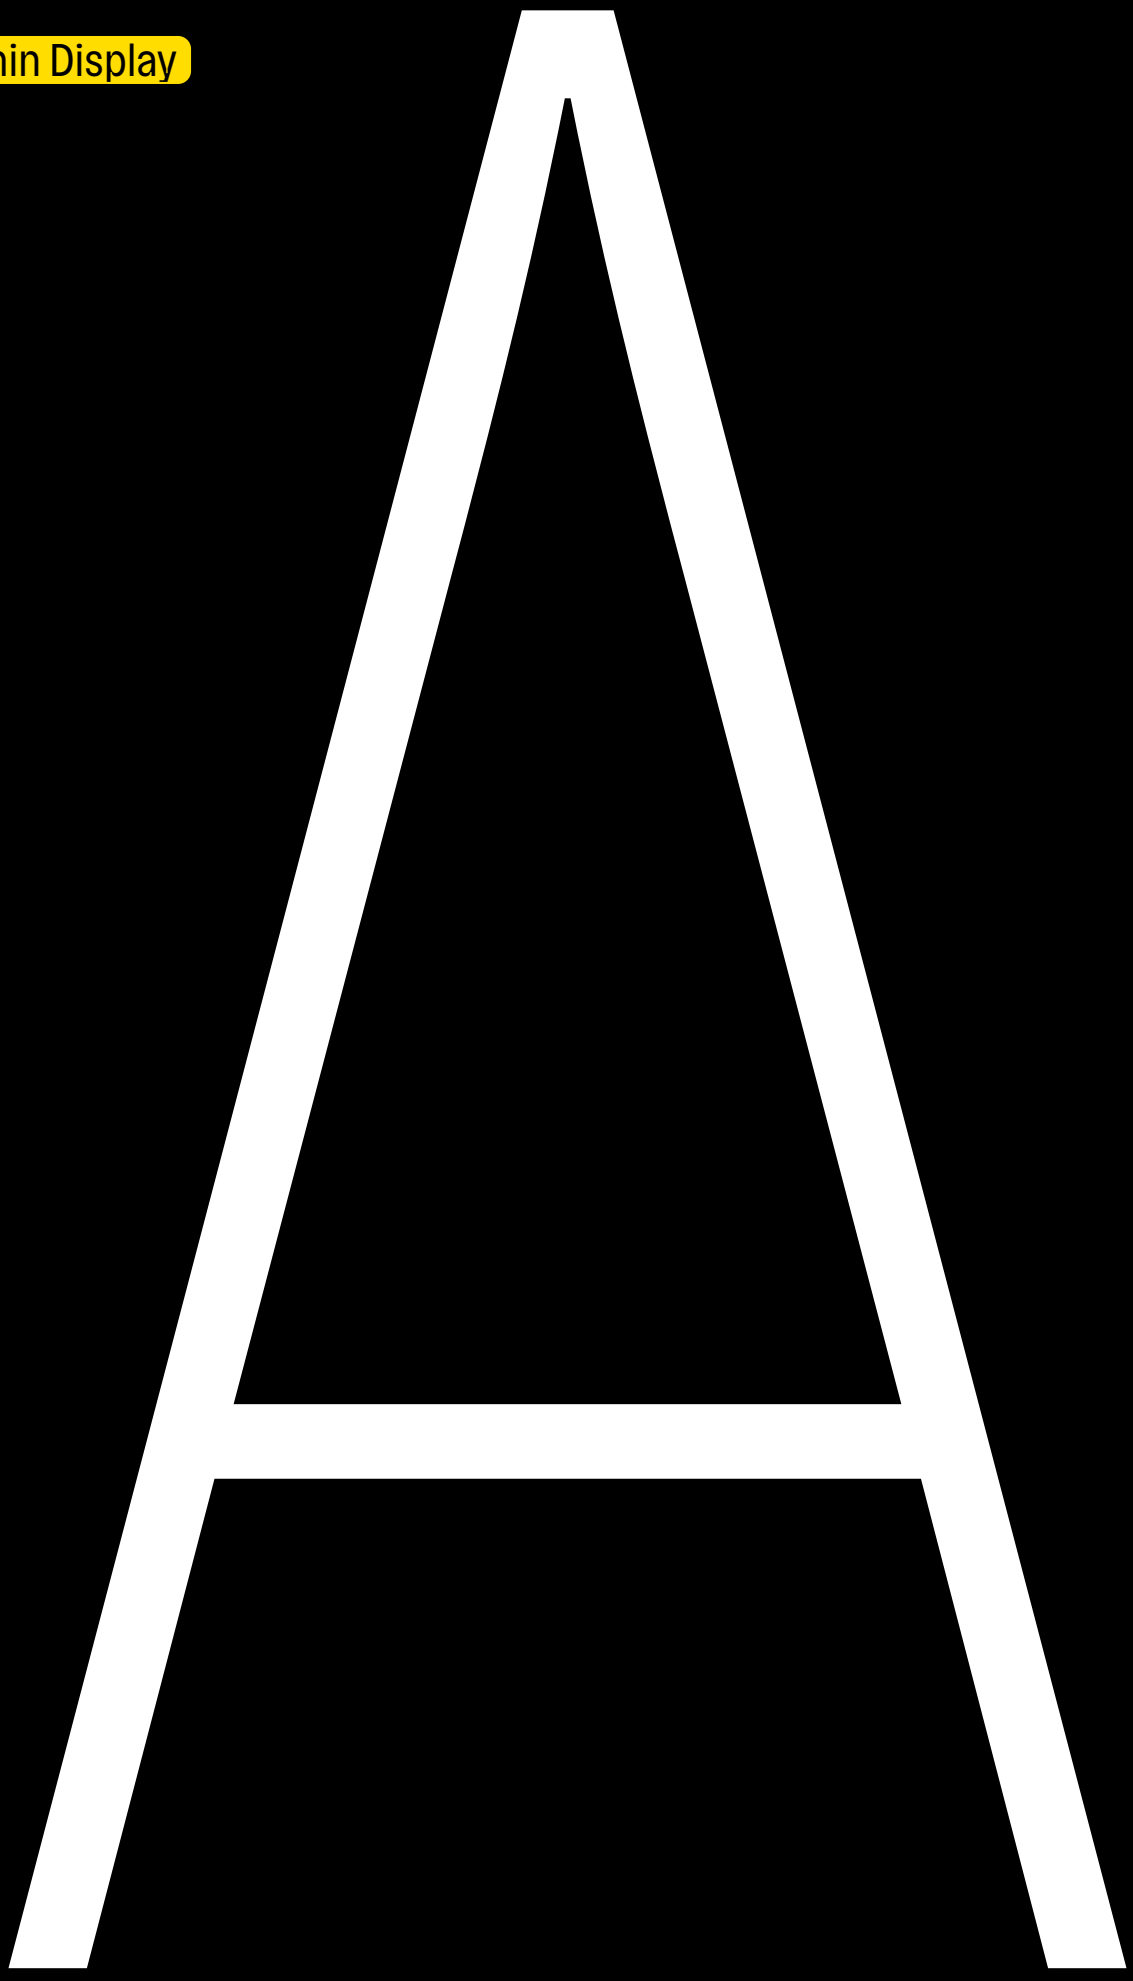

The ink traps have a relationship to the line weight of The Shed's logo and the enclosures that form The Shed's visual language. They resembles the outlined and filled versions of Margaret Seaworthy Gothic, suggesting a line that has been removed around the letterforms.

ART DIRECTION

New commissions need new images

Art direction is essential to communicating The Shed's mission to commission new, multidisciplinary works of art. Rarely will there be existing visual assets that can accurately reflect the nature of each program. And so it becomes the role of art direction to create new images, and manipulate provided materials, in order to build consistent seasonal campaigns and reflect The Shed's identity and energy through each new work.

This can be thought of as an editorial approach to art direction, where The Shed functions like a magazine publishing articles about different topics, with various moods and narratives, for a broad, dedicated audience. Art direction can show how these different pieces relate to each other, to a season, and to The Shed. The identity's strong typographic system holds it all together.

Photography

Portraits are often desired for theater and music performances where the actors, musicians, or writers are recognizable. Many will have existing headshots that are generic by necessity. In these instances, new photography should be shot that can allude to the new work being performed at The Shed.

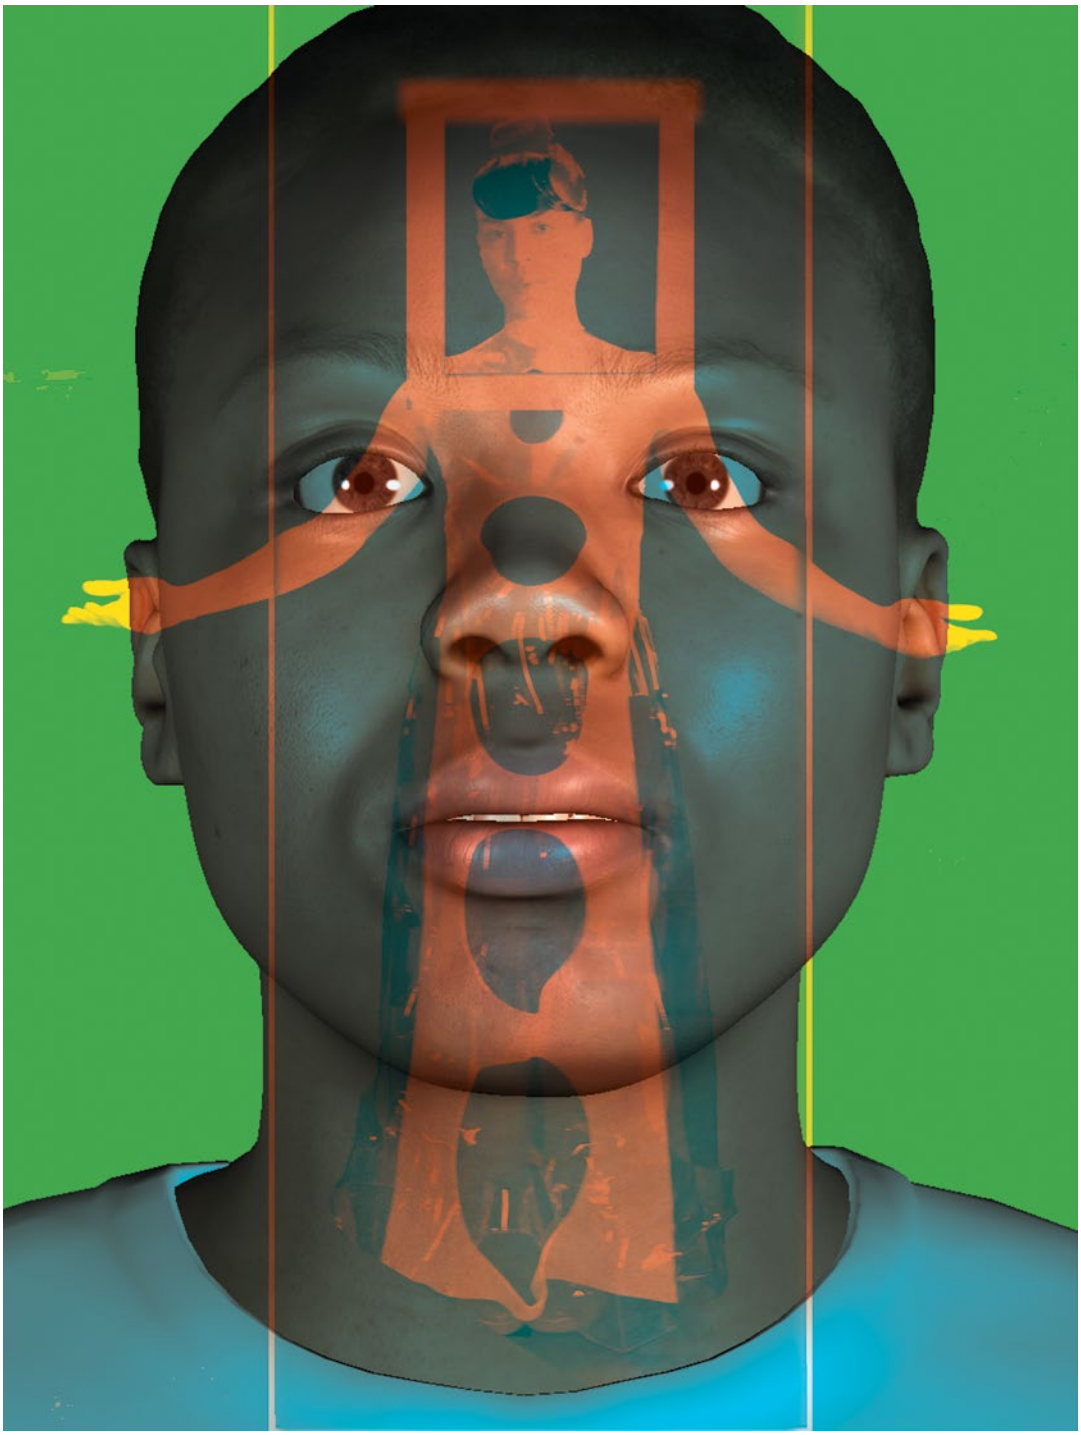

Dan Wilton photographed Renée Fleming and Ben Whishaw for *Norma Jeane Baker of Troy*, a dramatic work written by Anne Carson that explores the lives and myths of Marilyn Monroe. The setting (a banal office space) and the role of smoke as a recurring source of inspiration for this work informed the styling and art direction.

Arca planned to live at The Shed for the duration of her four-night performance, *Arca: Mutant;Faith*. A series of images, photographed by Jose Porroche, show her in a lived-in space, surrounded by objects and artifacts that resonate with her practice.

Manipulating Existing Assets

Existing artworks or documentation from past peformances can be manipulated to create new images for new commissions. The design strategies outlined earlier in these guidelines p. 16 should be used to make new form.

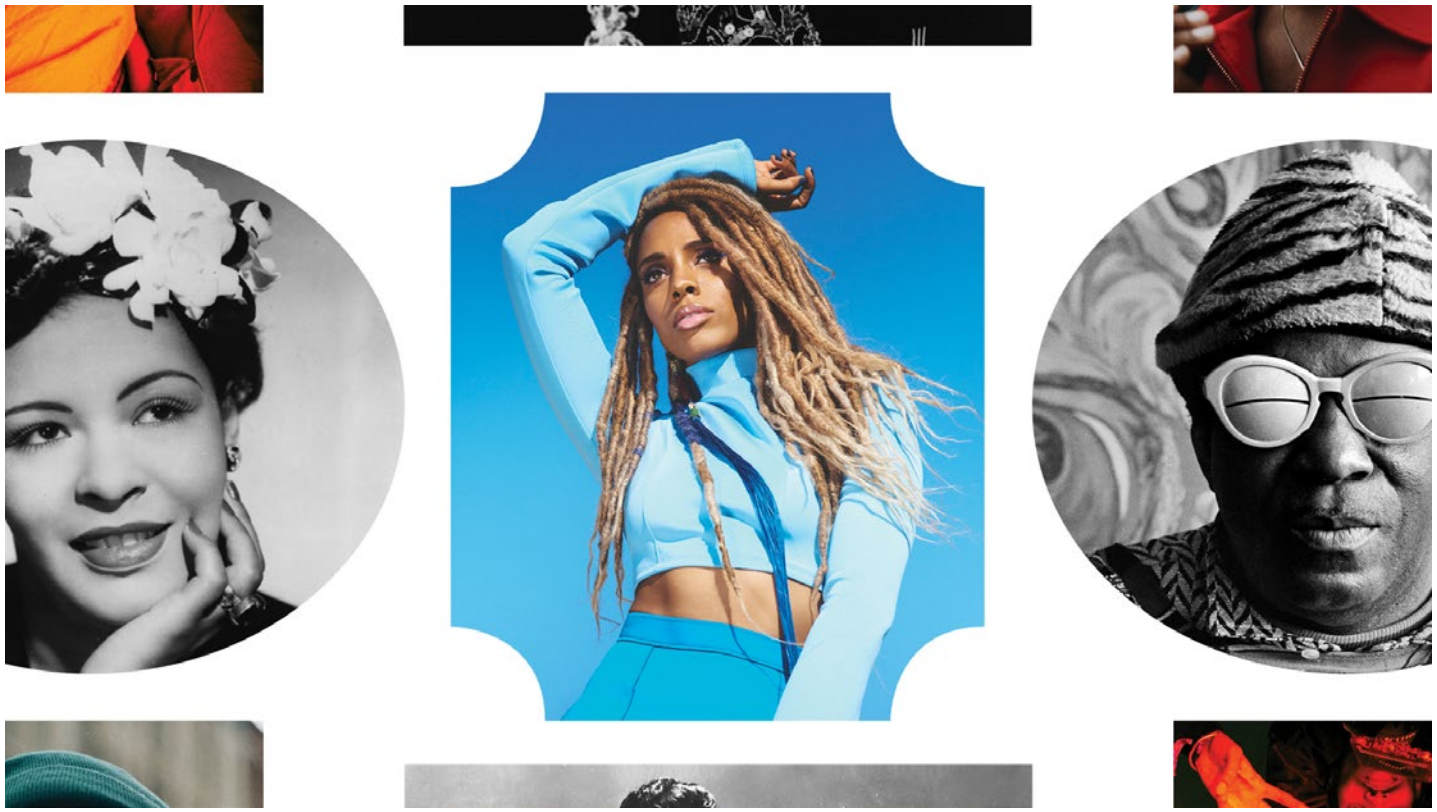

For *Manual Override*, a group show curated by Nora N. Khan that investigated how we might override our genetic, social, and technological codes, specific color channels from images of each artist's work were layered on top of each other to generate a series of new images.

Footage of dancers rehearsing William Forsythe's *A Quiet Evening of Dance* for a performance at another venue was all that was made available to represent the version that would appear at The Shed. The footage was edited, cropped, and clips were layered on top of each other in concentric ovals (that rotated in motion graphics) to suggest the rhythm of the dancers breathing, which was a major aspect of the performance.

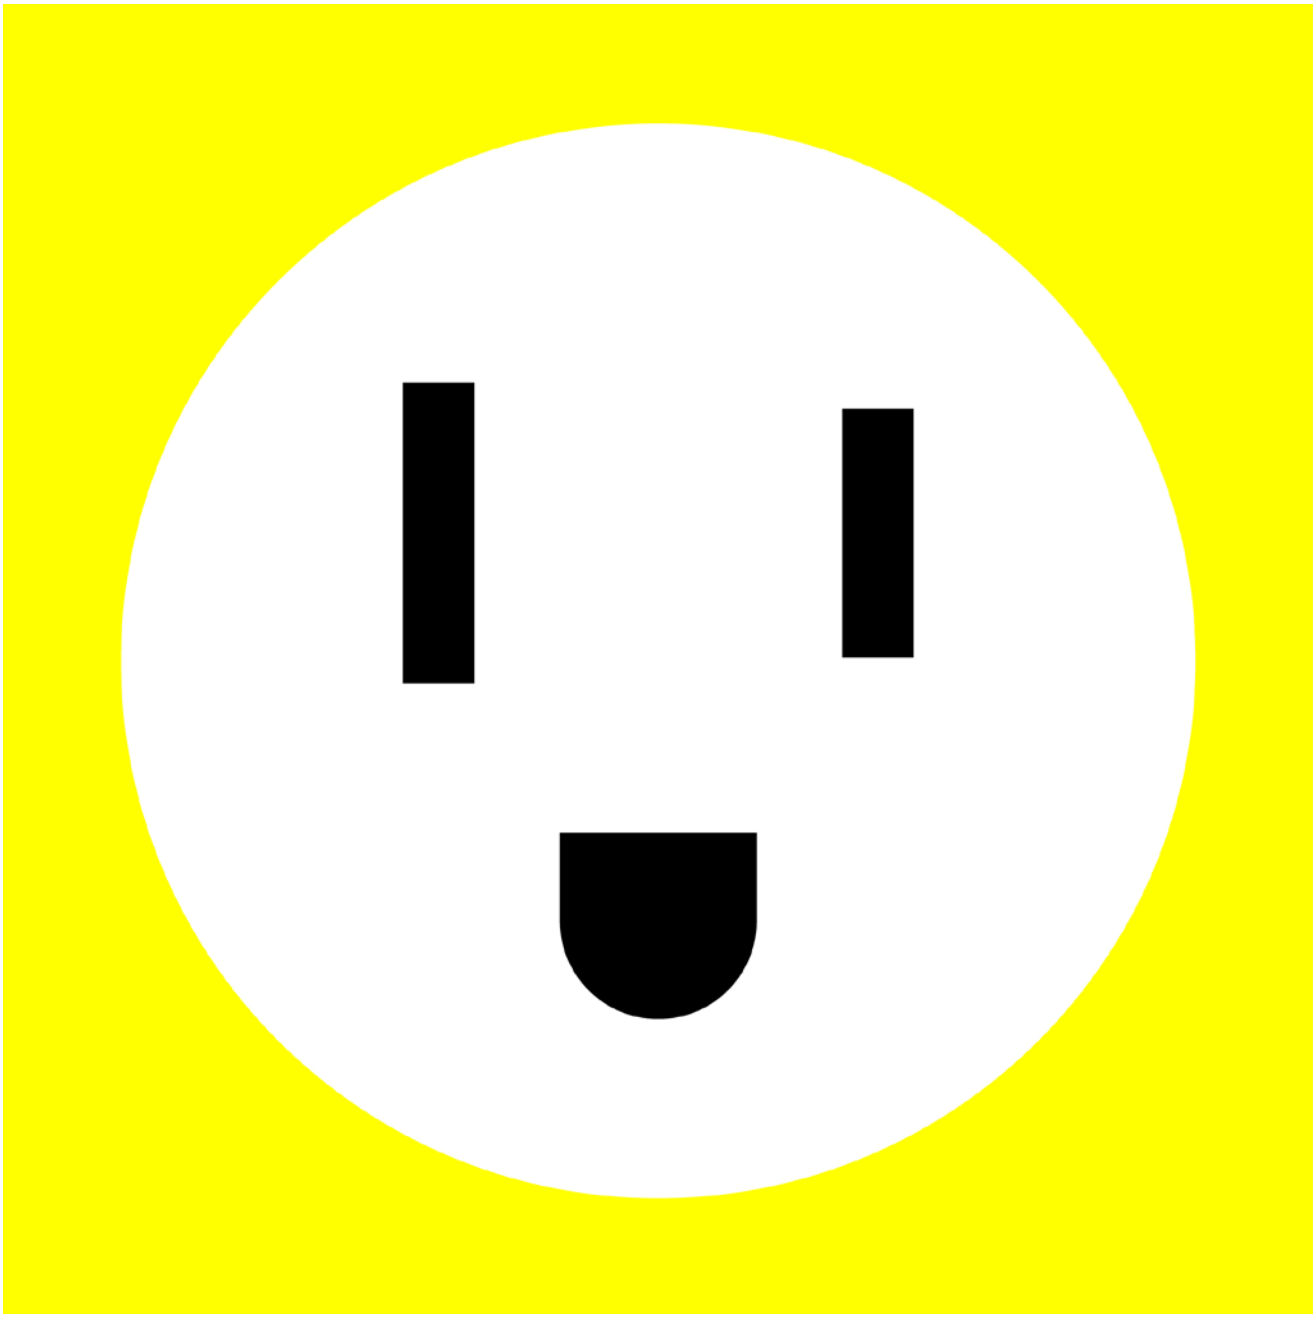

For *MAZE*, FlexNYC dancers were photographed and filmed in action by Renata Raksha. These assets were then placed in rectangular enclosures that were broken apart into new compositions that distorted the dancers' bodies. Even though new photography was produced for this commission, the art direction relied heavily on their manipulation after the fact.

For *Soundtrack of America*, a series of performances that traced the lineage and impact of African American music, existing images of each performer were enclosed within shapes meant to recall picture frames and family albums. The source imagery varied quite a bit, but the overall composition and animation style created a uniformity that allowed each artist to be represented as individuals that are part of a greater whole.

Illustration

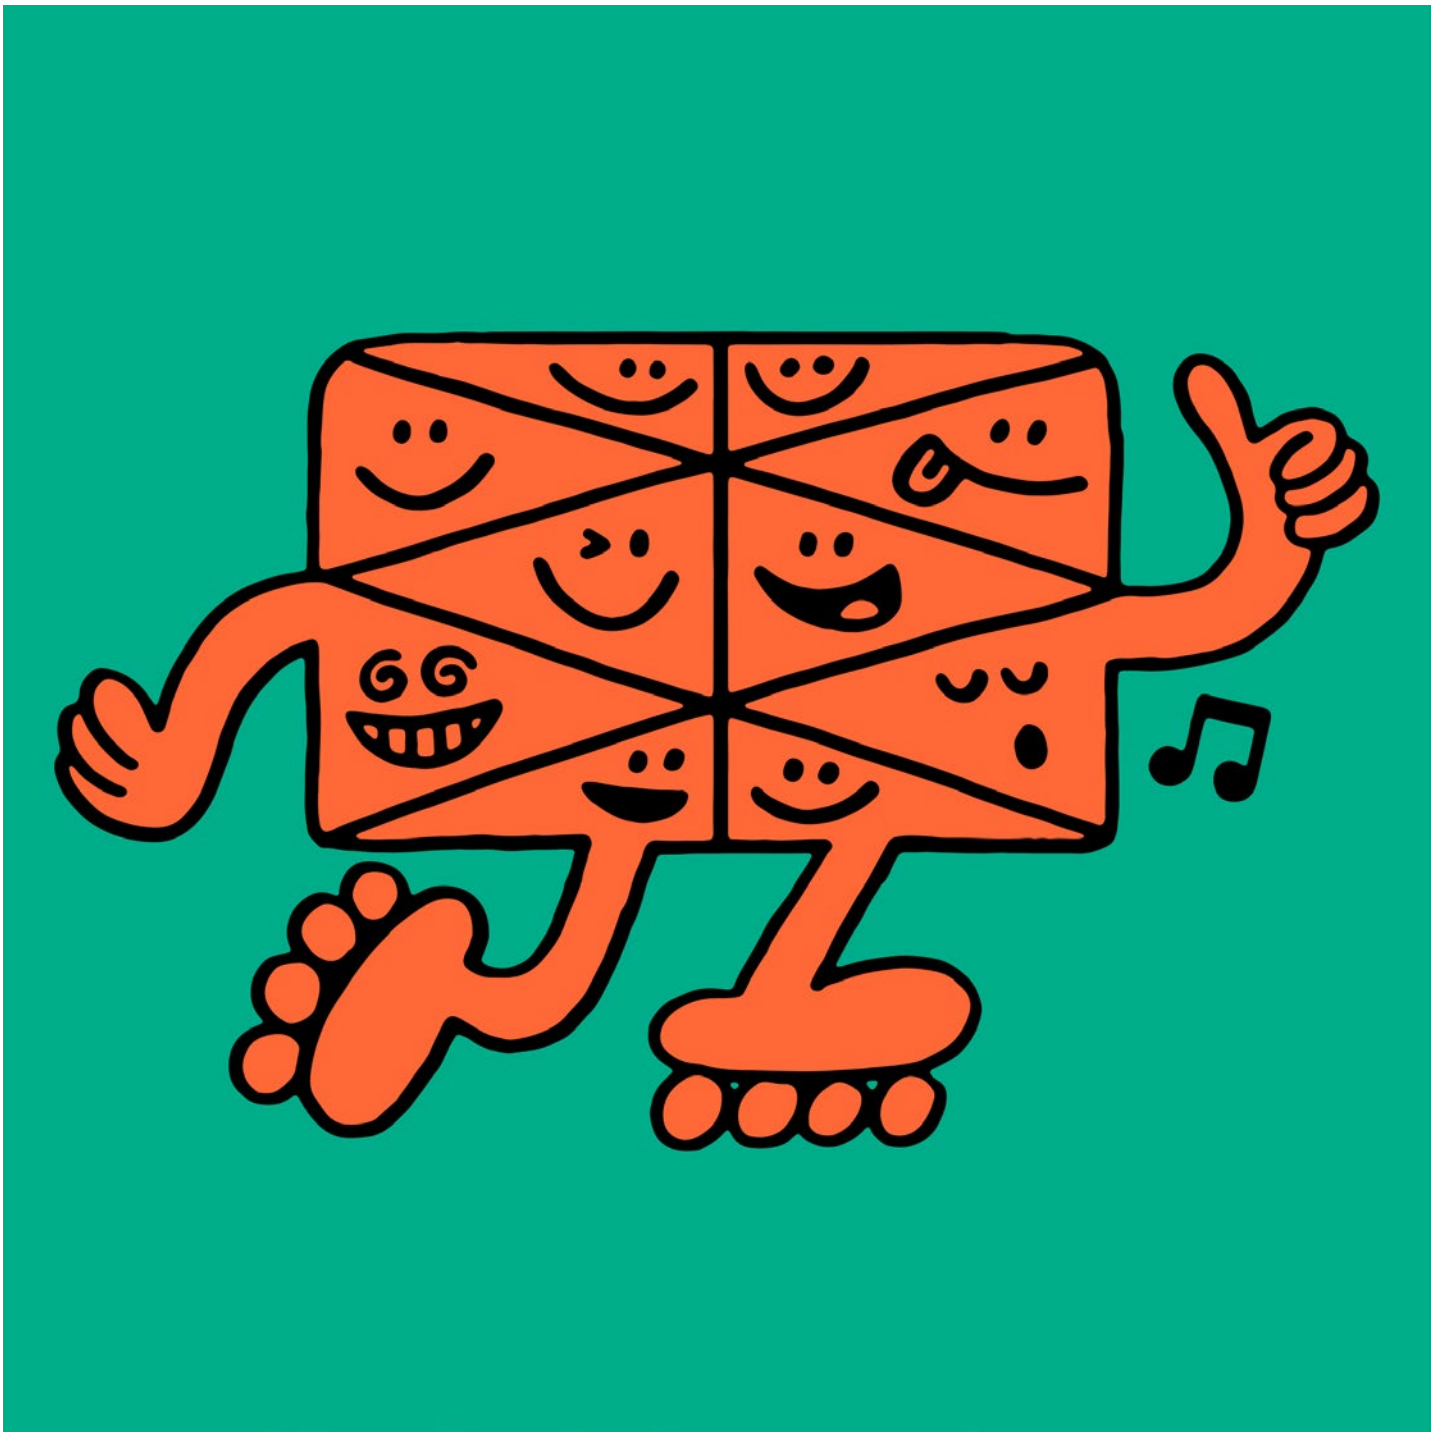

Not all programs can be represented through new photography of performers or manipulations of existing artworks. In these cases, new images can be made from scratch. Whether they are quickly done vector or hand-drawn illustrations, or highly produced computer graphics, they aim to reflect the ideas, themes, and essence of a program.

POWERPLAY explored the act of restoring individual power through collective action, working with NYC high school students exploring their voices through hip hop, spoken word, dance, and moving images. The art direction for this program is an illustration locates the individual (a face) in our everyday surroundings (the electrical socket), by playing with the show's title.

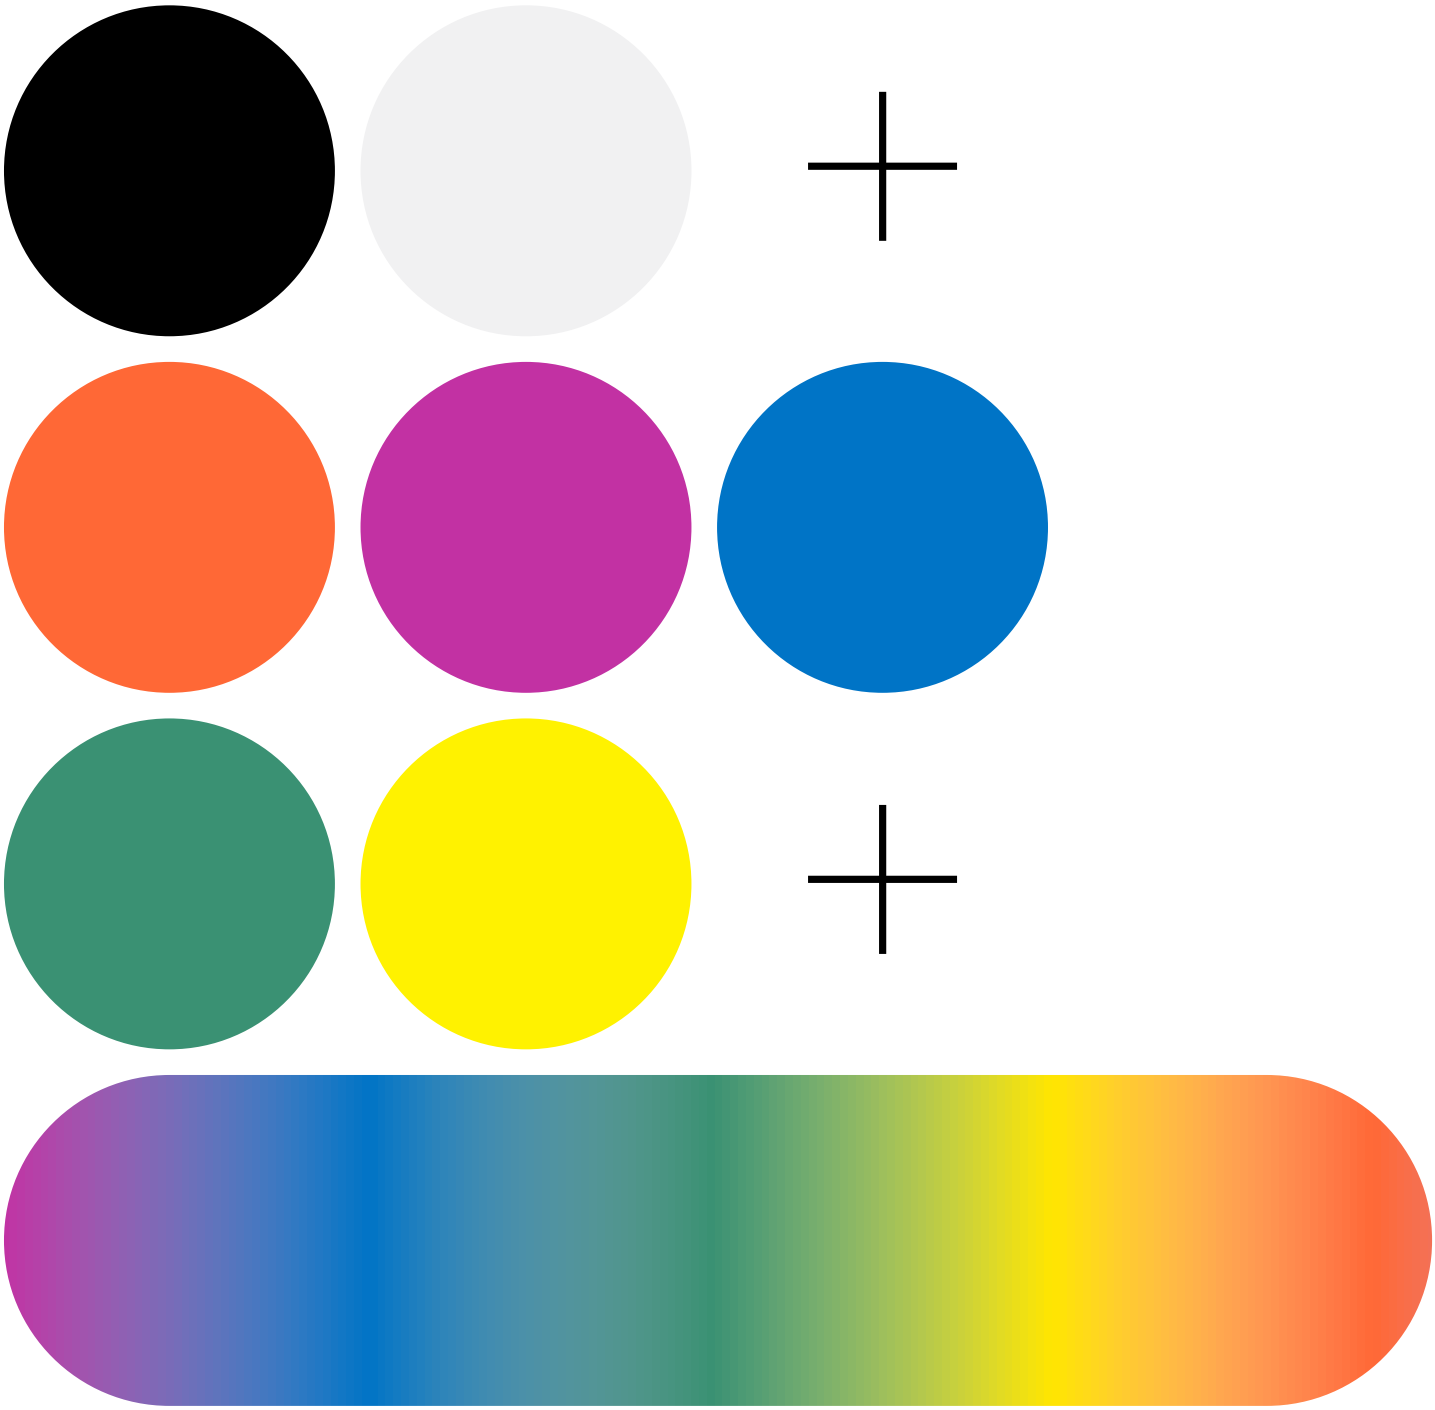

London-based studio TRAUM INC was commissioned to design and animate the lead characters and environment for *Dragon Spring Phoenix Rise*, a live-action martial arts dance production aimed at a younger audience.

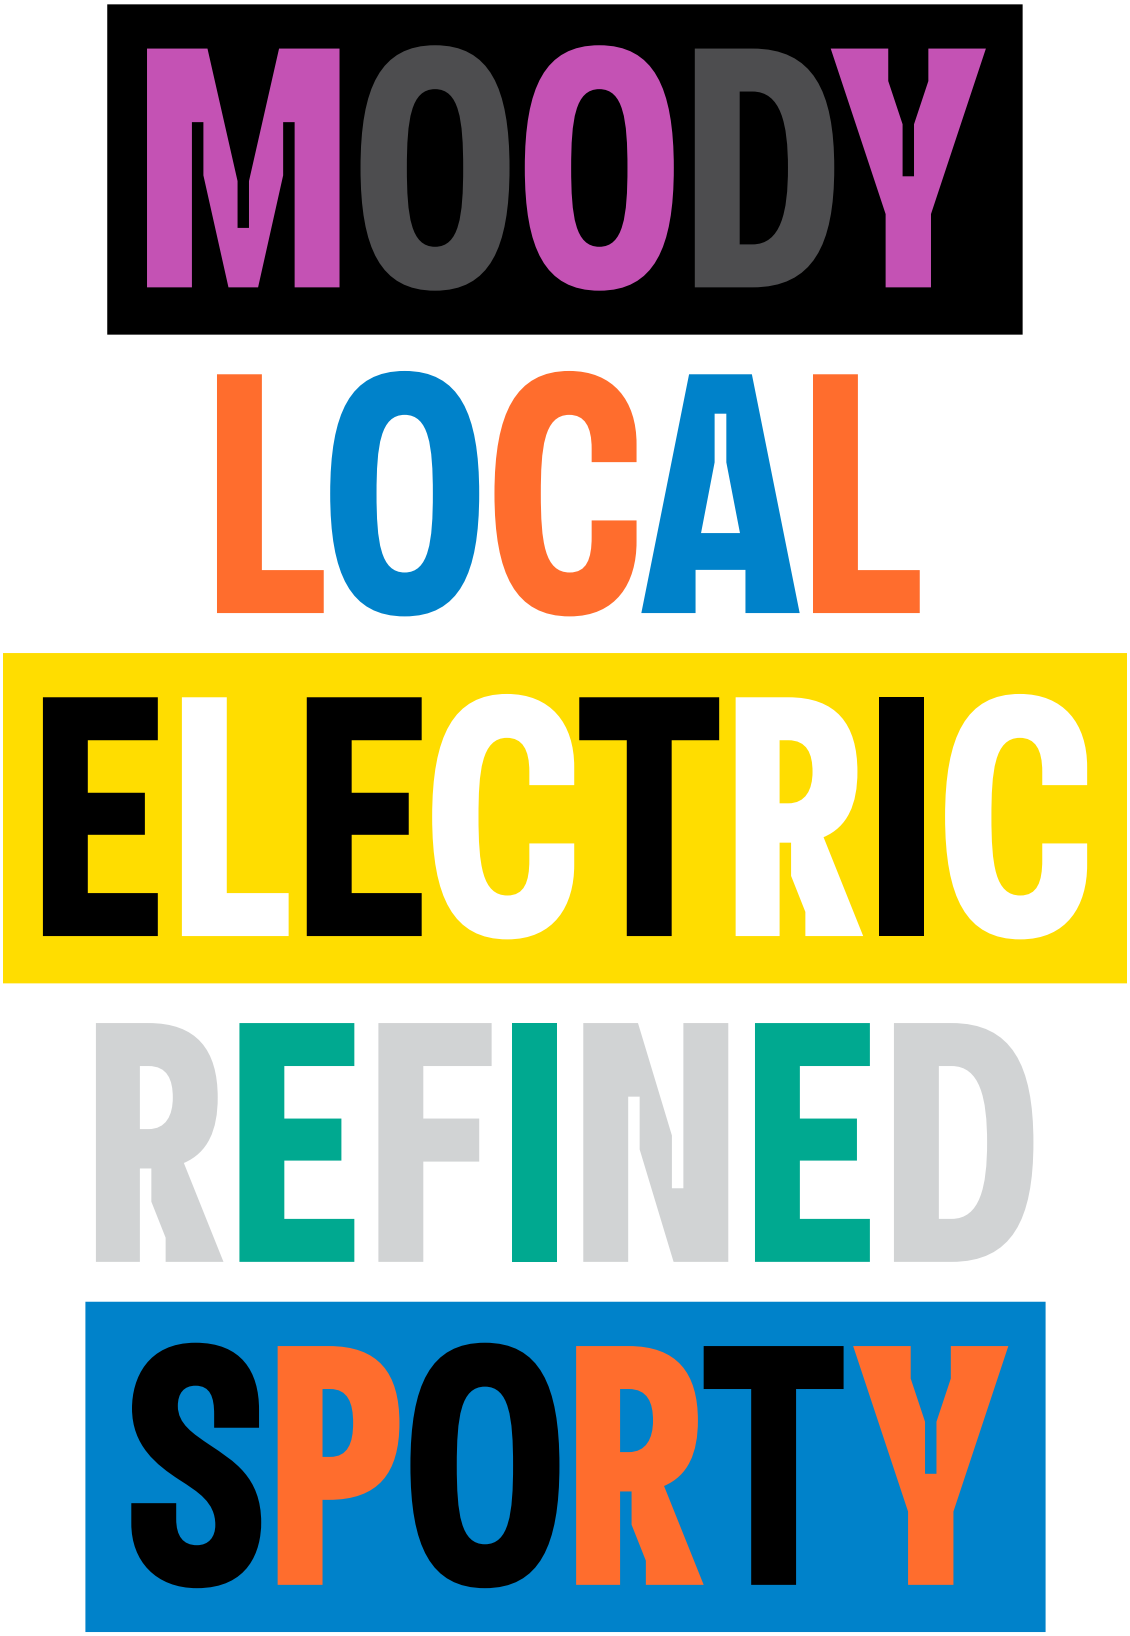

Sheddy, a cartoon version of The Shed illustrated by Tim Lahan, invited the public to *Meet at The Shed*, a daylong open house.

COLOR

The Shed's visual identity is primarily a typographic one, which is to say that like the building it operates in black and white. Color is introduced through the art and artists that occupy the galleries and theaters each season. (See Art Direction, p. 162.) For applications without art directed images, a color palette has been developed based on five vibrant colors from across the spectrum.

When used in particular combinations, they can feel...

The black-and-white palette can expand to include a range of grays to create more hierarchy and refer to the range of grays used throughout the building, creating a gradation that recalls the volume and reflection of the inflated ETFE of The McCourt's outer shell.

For special print pieces, or in animation, the idea of a gradient and reflection can be executed with a metallic foil or texture.

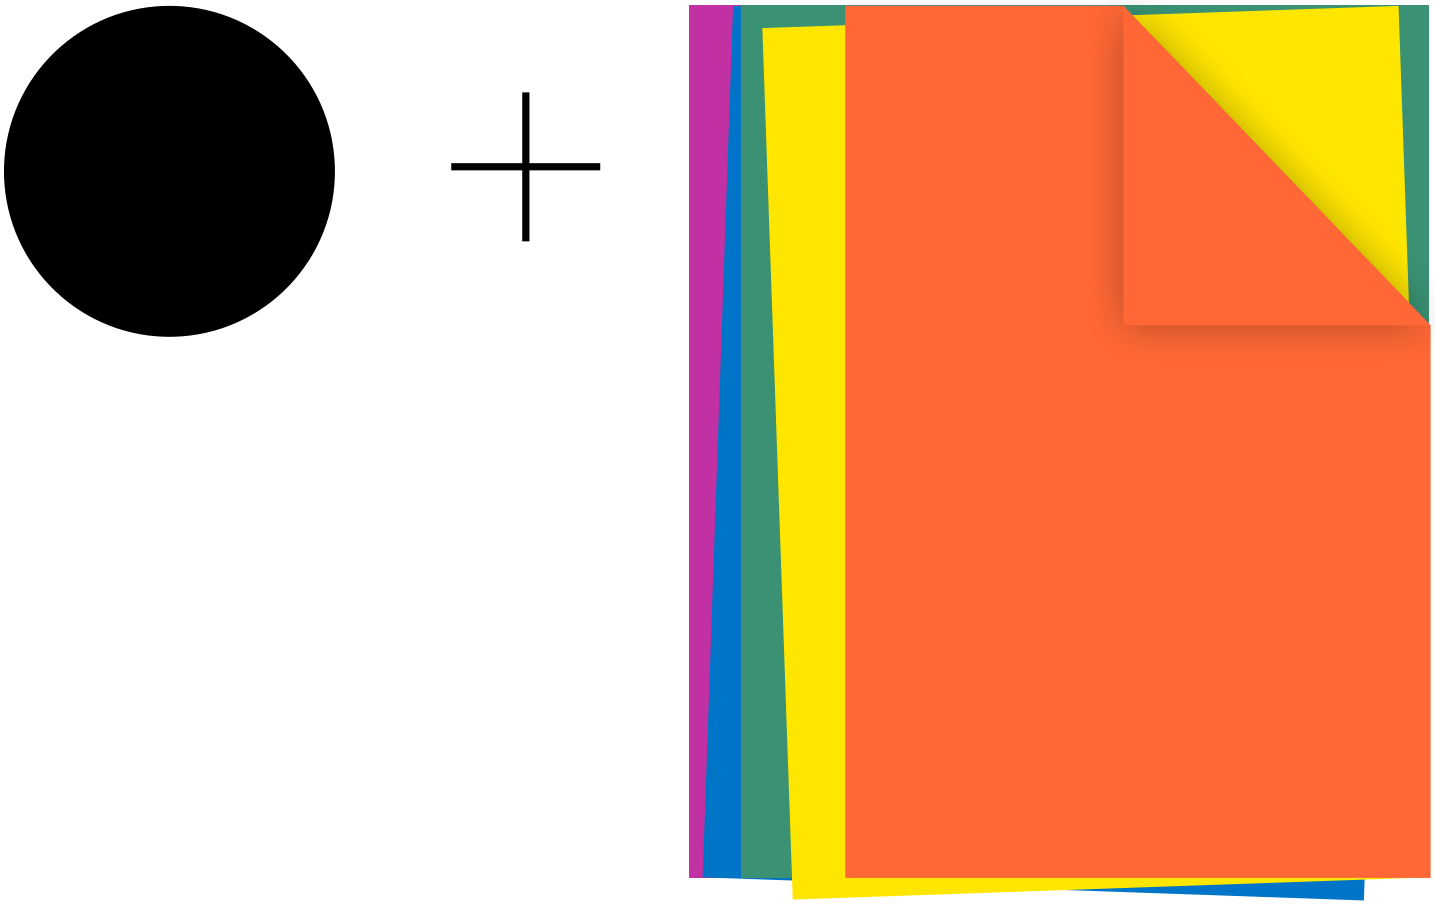

The reference to The Shed's industrial materials and its location in the center of the city's historical West Side rail yards can be communicated through the use of raw materials like chipboard and metallic paper. This can extends the design concept for the building's signage system, where materials are extruded or carved into by blind stamping, extruding, or die-cutting from materials that recall concrete, stone, and raw and painted metal.

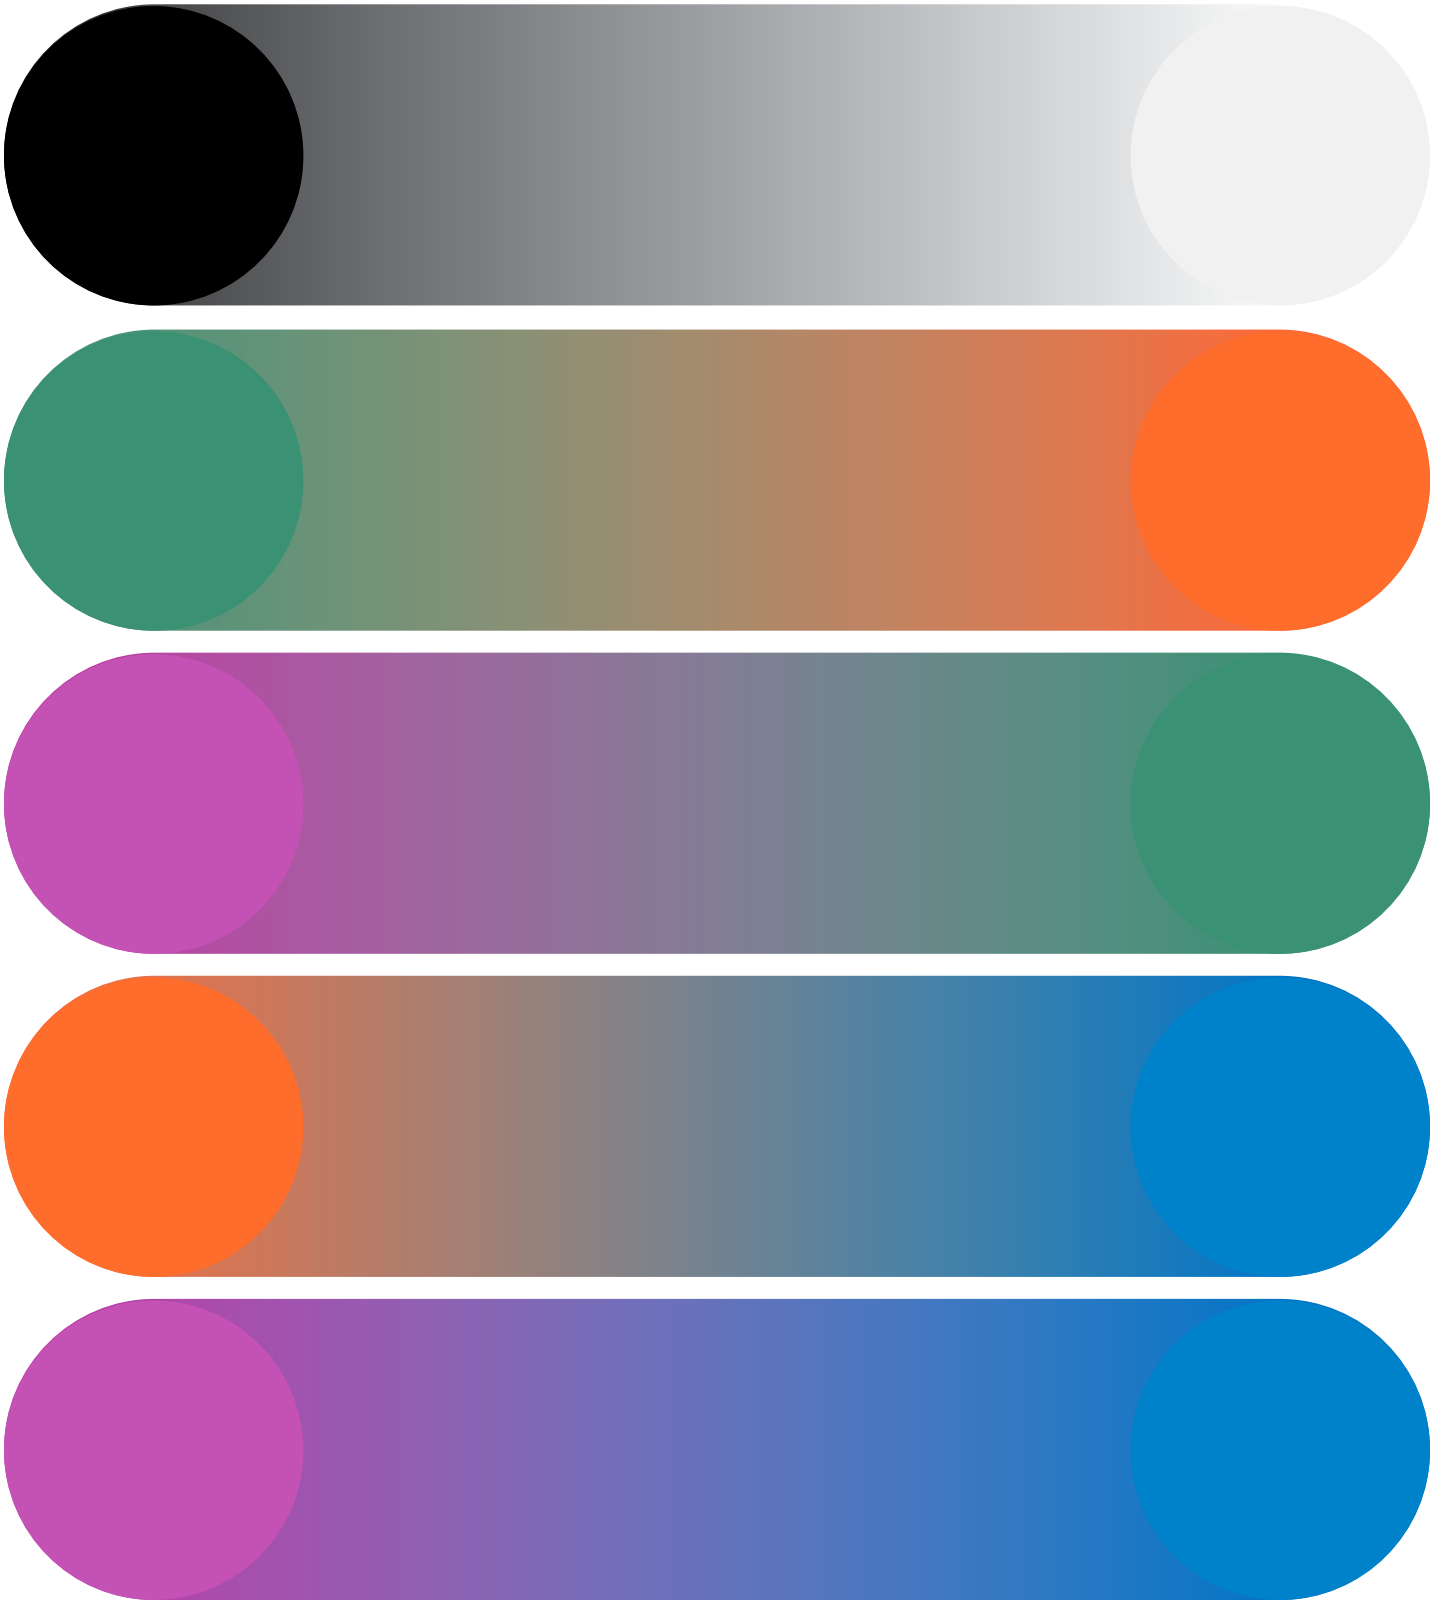

Colored paper can be used as an alternative to printing color.

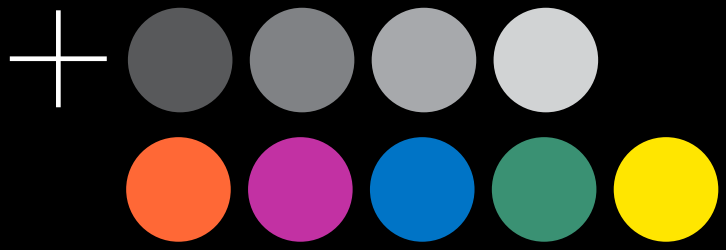

Colors can be paired to create gradients.
