Altered and adorned : using Renaissance prints in daily

Altered and Adorned: Using Renaissance Prints in Daily Life
has been published in conjunction with an exhibition of the same title, organized by and presented at the Art Institute of Chicago from April 30 to July 10, 2011.

Major funding for this book has been provided by a grant for scholarly catalogues and publications from the Andrew W. Mellon Foundation.

Generous support for the exhibition is provided by the Exhibitions Trust: Goldman Sachs, Kenneth and Anne Griffin, Thomas and Margot Pritzker, the Earl and Brenda Shapiro Foundation, Donna and Howard Stone, Mr. and Mrs. Paul Sullivan, and an anonymous donor.

USING RENAISSANCE PRINTS

WHAT DID PEOPLE DO WITH PRINTS during the Renaissance? How were they displayed? Who saw them? Why, in the end, did most of them disappear? This book investigates the ways woodcuts, engravings, and etchings functioned in European society from the late fifteenth through early seventeenth centuries, and how they were consumed. It takes a rather unusual art historical approach, for today Renaissance prints are generally prized for their aesthetic importance—the least compromised by time and previous collectors, the better—and viewed in artificially isolated states, matted and kept beneath protective layers of glassine in acid-free solander boxes.

But seemingly unused prints of this sort are rare unless substantial conservation has been conducted. Inexpensive and readily available, early prints were not regarded as sacrosanct artworks, so many exhibit obvious marks of physical intervention by their users.[1] Even comparatively clean impressions preserved in long-forgotten albums usually bear traces of folding, inscribing, pasting, stamping, or trimming, though such clues may stay hidden on their blank versos.[2] In addition, early prints were not made to last, so their papers and inks have darkened or faded and accumulated stains and tears. Accordingly, this account focuses on the materiality of prints, including these supposed imperfections, drawing on the wide range of little-seen examples from the Art Institute of Chicago's collection. Exploring the initial functions and original contexts of these prints and printed objects, it reconstructs the various ways in which owners saw, handled, and used them on a daily basis.

Even more than books using Gutenberg's new movable type, single-sheet prints were revolutionary, versatile objects, potentially limitless in quantity and highly portable. Editions ranged from the hundreds (for engravings) to the thousands (for woodcuts), and pirated copies of the most popular works abounded. Devotional aids, including iconic images of Christ, pilgrim pennants, and other souvenirs, were particularly common, as were playing cards. By the sixteenth and early seventeenth centuries, prints' subject matter and audience had broadened. Religious images and cards continued to flourish. A wide section of the population purchased many other items, such as personalized book plates, caricatures, political broadsheets, and portraits, as well as calendars and maps. Topics deemed too minor or too controversial for more permanent forms—especially Protestant propaganda—thrived as ephemera. Famous artworks replicated in print became more famous with each copy. In addition, prints increasingly substituted for other artistic media: paintings and tapestries, decorations for boxes and other three-dimensional objects, and functional scientific instruments.[3] These were the easily manipulated, altered, and hands-on prints of a Renaissance visual culture that remains little known to the modern public for, once the prints or the objects they adorned became damaged or outmoded, they were easily discarded or replaced.

An illusionistic, hand-colored German etching presents several of the most popular and ephemeral printmaking products—genre pictures, maps, playing cards, religious texts, and wall calendars—tacked to a wall with paste or daubs of wax (fig. 2). Prints mounted in this manner were used for decorating, devotion, entertainment, or study, and were attached to ceilings, furniture, or even more portable supports such as boards, boxes, and fabric. Though this is an eighteenth-century work, the practice is also depicted

1. Detail of *The Lamb Receiving the Sealed Book* (fig. 4).

2. Christian Gottlob Winterschmidt (German, 1755–c. 1809). *Quodlibet with Goldfinch*, late 18th century.

Etching hand colored with brush and yellow, black, red, green, brown, blue, purple, pinkish-tan, gray, gray-brown, and white watercolor on ivory laid paper; image/sheet (cut within plate mark): 261 x 206 mm (10 5/16 x 8 1/8 in.). Anonymous gift, 1950.1373. Unless otherwise noted, all works are in the collection of the Art Institute of Chicago.

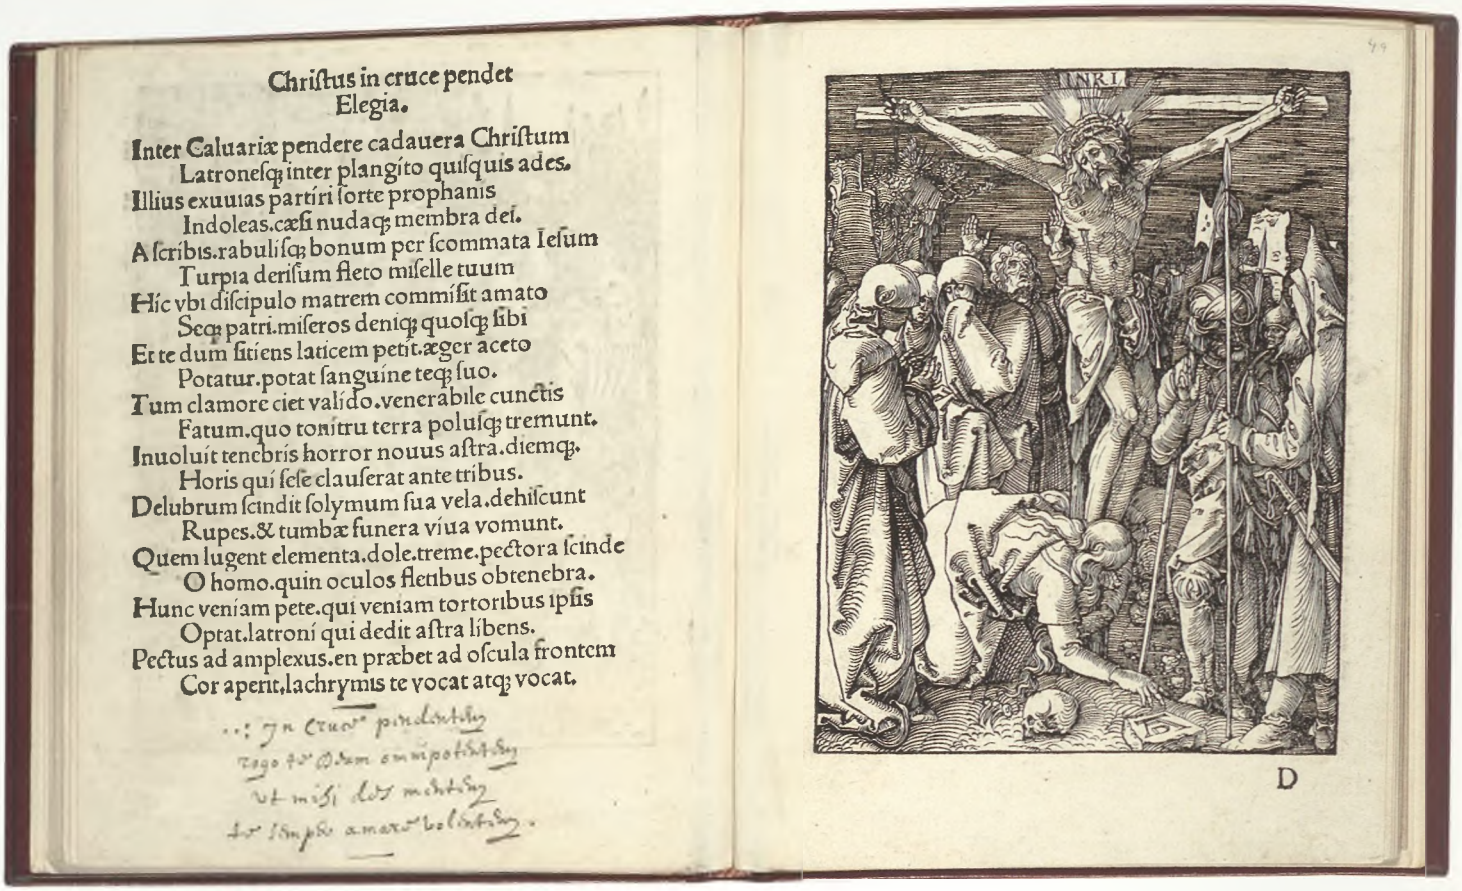

in fifteenth- and sixteenth-century paintings of the interiors of taverns and private homes.

The format of early prints dictated their function. They came in varying sizes and shapes that depended on the dimensions of the paper and type of matrix used to make the impression. Woodcuts were carved out of solid blocks, and their thick borders mimicked vertical portraits, horizontal landscapes, or, if the woodblock were sculpted into a circle, tondo paintings (see fig. 47).[4] Engravings were incised into metal plates pounded thin and burnished, which could be even more easily cut and shaped than thick wood into the outlines of specific objects (see figs. 18, 45). Full-sheet images could be grouped into larger grids to form wall-size compositions (see fig. 19). Most often, a single-sheet print with a blank reverse was intended for wall display, but the back could have been left blank so the print could be put to a variety of other uses, from appliqué decorations for boxes to framing devices for other prints. As paper was handmade and expensive, book pages would usually be printed on both sides. But on the principle that nothing should be wasted, the artist might also reuse the same woodcut for technical diagrams illustrating instrument manuals, or even to make prints that could themselves be cut up and used as instruments (see figs. 69A–B). Finally, single sheets comprised of multiple images—from tiny edible devotional prints to playing cards—were also meant to be cut apart, a function confirmed by the markings on the few complete sheets that survive (see figs. 27, 58). An eminently flexible new medium, printmaking allowed for all these uses and many more.

Beyond being cut out from gridded sheets, assembled into larger compositions of multiple images, or affixed to different objects, prints were altered or used in a number of other ways not necessarily intended by their producers. Some of these practices were so common that they were more of an alternate use than an abuse per se. Myriad ways of handling are known, often religious in nature, including kissing an image of the Virgin or lifting a veil attached to a print.[5] Annotating texts and images was commonplace. Viewers meditated on them by filling in portions of the design as they contemplated it, labeling the main characters, or directly inscribing prayers for intercession on their behalf.[6] The Art Institute possesses an annotated exemplar of Albrecht Dürer's *Small Woodcut Passion (Passio Christi)*, his small woodcut cycle of the life of Christ, with Latin verses by the monk Benedict Chelidonius (see fig. 3). Opposite the full-page image of the Crucifixion, a sixteenth-century viewer honed in on this sacred event. He inscribed several lines personalizing his experience of the print below Chelidonius's poem, where there was room: *In Cruce pendentem / rogo te Deum omnipotentem / ut mihi des mentem / te semper amare volentem* (I ask you omnipotent God, hanging on the Cross, that you grant me a mind wishing always to love you). This appears to be an intimately pious, original outburst, as it addresses Christ directly with the viewer's request, but it in fact quotes the last four lines of a well-known Latin prayer from the Hours of the Cross.[7] This addition is similar to the marginal notations that appear in manuscripts and unillustrated printed books. Other viewers went further, making changes inspired by visual suggestions in the images themselves. Pious pen additions appear in a small woodcut illustration of Saint Otilia from an unidentified book on the lives of the saints likely published in Strasbourg in the late fifteenth century (cat. 27). Otilia's halo has been crisscrossed by a network of arcs, the tiny soul fleeing to heaven out of the mouth of hell has been given indications of muscles or rib bones, and the altar with the saint's vision of the Risen Christ has been supplemented with a filigreed outer border. In a Chicago etching copying Parmigianino's *Saint James the Greater*, three-quarters of the upper margin has been trimmed away, leaving only the tip of the saint's standard emerging from the top of the print (cat. 29). The form of the etching itself conjured up this alteration, a change made to at least one other impression, at the British Museum.[8]

By contrast, some viewers interacted with prints in unintended and unusual ways that could be said to constitute "misuse" or "abuse." In these cases of explicit censorship or blasphemy, users physically damaged the prints or marked margins and images with critical words and graphical additions. In the political and religious upheaval spurred by the Reformation, the quick turnaround of print production enabled the medium to address more current and controversial topics than painting, and thus prints acted as sounding boards for viewers' reactions.

The earliest example of blasphemous alteration in the Art Institute's collection appears in a

3. Albrecht Dürer (German, 1471–1528). *The Crucifixion*, folios C viii (verso)–D from *The Small Woodcut Passion (Passio Christi)*, 1511.

Book with woodcut and letterpress, with additions in pen and brown ink on cream laid paper, in modern full red calfskin, sewn on raised bands, with blind fillets around inner edges of boards, blind lines and gold titling on the spine, and hand-sewn silk headbands; folio: 159 x 119 mm (6¼ x 4¹¹⁄₁₆ in.). Clarence Buckingham Fund, 1951.117.

hand-colored and hand-printed woodcut blockbook image from the story of the Apocalypse (fig. 4), illustrating the verse, "And I beheld, and, lo, in the midst of the throne and of the four beasts, and in the midst of the elders, stood a Lamb as it had been slain, having seven horns and seven eyes, which are the seven Spirits of God sent forth into all the earth" (Revelations 5: 6–7).[9] The Lamb of God—in its own roundel, holding an open book with pages labeled Old Testament and New Testament—attracted the attention of a viewer. Perhaps inspired by the crown of seven stubby horns on the Lamb's head and the seven eyes on his face, five of which are denoted only by circles, this unknown individual added a cluster of four semicircles just beneath the Lamb's tail (see fig. 1). The immediate effect seems blasphemous and rather juvenile, as the shapes look suspiciously like a series of turds spewing downward. Excrement became a particularly common theme in Reformation Germany, thanks in part to Martin Luther's own colorful rhetoric, and frequently appeared in satirical anti-Catholic woodcuts

by Lucas Cranach and his workshop, Peter Flötner, and many others.[10] As the type of pen and ink used on the print suggests it is an early annotation, perhaps it was made during this transitional period. The verso of the sheet shows no evidence of having been applied to a wall, but rather has sewing holes on its right side, reinforcing the idea that it was used within the complete *Apocalypse* blockbook, without being glued to the subsequent page. This arrangement may have given the same annotator access to its verso, for here he made a series of vertical scratches in a similar ink. These unfold almost winglike over the roundel holding Christ, but the writer's intentions are less clear than in his derisive treatment of the Lamb.

A more refined Italian engraving from nearly a century later, *Apollo Slaying Python*, by the Master of the Die, is not a book illustration but the first in a series of four prints about the god's unsuccessful pursuit of the nymph Daphne (fig. 5). In this preamble, Apollo dispatches Python (a dragon menacing the kingdom of Pythos) with his arrows. He then boasts to Eros about his prowess (at upper right), which goads the god into making him fall in love with Daphne while instilling her with hatred for her suitor. The alteration to the Chicago impression is not initially visible, but closer inspection reveals that this predominantly nude Apollo is missing his genitalia. While the print has also sustained marginal damage, a viewer deliberately scraped away the ink at Apollo's crotch in a campaign of extremely localized censorship. Given how modestly the god was originally endowed, this change does not significantly alter the image overall. Rather, Apollo's sizable arrow quiver dangles more provocatively between his legs than his own penis ever did and does so at much the same angle. The objecting viewer, apparently lacking a grasp of age-old visual puns, may

4. Artist unknown (German, 15th century). *The Lamb Receiving the Sealed Book*, folio C from *The Apocalypse*, c. 1460/70.

Blockbook woodcut hand colored with brush, stencil, and yellow, tan, gray, green, black, and red watercolor with additions in pen and brown ink on ivory laid paper; image/block: 255 x 195 mm (10 1/16 x 7 11/16 in.); sheet: 274 x 208 mm (10 13/16 x 8 3/16 in.). Joseph Brooks Fair Fund, 1939.2106.

5. Master of the Die (Italian, active 1532), after Baldassare Peruzzi (Italian, 1481–1536). *Apollo Slaying Python*, plate 1 from *The History of Apollo and Daphne*, 1530/60.

Engraving on ivory laid paper, with engraved legend attached and scraping; sheet: 240 x 176 mm (9 7/16 x 6 15/16 in.); image/plate: 218 x 176 mm (8 9/16 x 6 15/16 in.); text plate: 26 x 176 mm (10 1/4 x 6 15/16 in.). The Wallace L. DeWolf and Joseph Brooks Fair Collections, 1920.2327.

not have realized that his interference merely shifted the visual emphasis to this larger and more obvious phallus substitute.

Perhaps in response to the taste for alteration, as the Renaissance progressed, prints were increasingly published with conspicuously absent or empty banderoles (decorative banners) or heraldic elements so that viewers might fill in the blanks themselves. The late-fifteenth-century German engraver Israhel van Meckenem used banderoles to draw viewers into his coyly provocative *Falconer and Lady* (cat. 28) from a series of twelve secular couples, and into his *Children's Bath* (fig. 8). These banners could offer space for titles or even act as early thought or speech bubbles, as in the latter image, a genre scene of playful youngsters in a large tub overseen by a single overworked female attendant. The first woodcut of God the Father in the 1493 *Nuremberg Chronicle* includes two empty shields at the bottom (which were illuminated for the author Hartmann Schedel's personal copy; see p. 39), and the Florentine Otto print engraving of *Judith with the Head of Holofernes* includes a blank shield hanging from a tree (fig. 45). While none of the three known impressions of the latter have been touched, the shields in other Otto prints were filled in with pen drawings in the fifteenth century.[11] Jost Amman, a Swiss artist active in Nuremberg, created an entire book of such fill-in-the-blank images. Nearly every page of this 1579 collection of woodcut emblems was ready to be completed with heraldic designs by the purchaser, including the image shown here: an empty coat of arms accompanied by a naked woman holding a wine glass, opposite a parrot who is attracting flies (fig. 6).[12] Amman's book of these illustrated devices was one of the first published. It was designed and used as an autograph album in which travelling students collected the signatures and witticisms of their teachers and classmates. The pictures for these volumes had previously been either drawn or cut from other sources and pasted in, but here the woodcuts offered

6. Jost Amman (Swiss, 1539–1591). *Emblem with Blank Heraldic Shield*, folio 156 from the *Anthologia Gnomica*, 1579 (assembled into portfolio, 1937).

Woodcut and letterpress on cream laid paper; image/block: 78 x 110 mm (3 1/16 x 4 5/16 in.); sheet: 100 x 155 mm (3 15/16 x 6 1/8 in.). Print Sales Miscellaneous Fund, 1938.88.52.

a concentrated group of emblems ready for personalization, perched opposite a variety of pithy sayings (the one adjoining the current page is about *Spes*, or Hope). Amman's hands-on publications did not end there. He produced numerous prints for decorating boxes and in 1588 illustrated a *Kartenbuch*, a book of playful card designs that were sometimes cut out as a deck.[13] Printers' ink dabbers, glass goblets, metal beakers, and books served as the suits.

These intimate relationships between prints and their owners—whether intended or unforeseen, approving or censorious, suggested by the image itself or the viewer's own agenda—imply that Renaissance viewers were so aware of the broad functionality of printed images that they already took them for granted. Printmaking could address a wide assortment of subject matter and could range enormously in the relative intricacy of the images produced; these factors enabled it to cater to a variety of different markets. Prints coexisted with other objects and even served as objects themselves, and their viewers responded to them in unique ways. The prints thus far discussed, though differing in complexity and expense, and altered in various ways, still remained effectively two-dimensional unless they were pasted into or onto other objects. Renaissance printmaking could and did go even further, into three dimensions, literally turning prints into objects with didactic and even transcendental properties. All of these applications were rooted in relief and intaglio printing of single sheets, but even so simple a foundation could ultimately produce printed objects with multiple functions.

NOTES

USING RENAISSANCE PRINTS

1. Major studies focusing on the use of prints have included: Paul Heitz, ed., and W. L. Schreiber, *Einblattdrucke des fünfzehnten Jahrhunderts*, 100 vols. (J. H. Ed. Heitz, 1899–1942); Max Lehrs, "Die Dekorative Verwendung von Holzschnitten im XV. und XVI. Jahrhundert," *Jahrbuch der Königlich Preuszischen Kunstsammlungen* 29 (1908), pp. 183–94; Arpad Weixlgartner, "Ungedruckte Stiche: Materialien und Anregungen aus Grenzgebieten der Kupferstichkunde," *Jahrbuch der Kunsthistorischen Sammlungen des Allerhochsten Kaiserhauses* 29, 4 (1911), pp. 259–385; Adolf Spamer, *Das kleine Andachtsbild vom XIV. bis zum XX. Jahrhundert* (Bruckmann, 1930); A. Hyatt Mayor, *Prints and People: A Social History of Printed Pictures* (Metropolitan Museum of Art/New York Graphic Society, 1971); Horst Appuhn and Christian van Heusinger, *Riesenholzschnitte und Papiertapeten der Renaissance* (Uhl, 1976); David Landau and Peter Parshall, *The Renaissance Print: 1470–1550* (Yale University Press, 1994); Jan van der Stock, *Printing Images in Antwerp: The Introduction of Printmaking in a City: Fifteenth Century to 1585*, Studies in Prints and Printmaking 2 (Sound and Vision Interactive, 1998); Susan Dackerman, *Painted Prints: The Revelation of Color in Northern Renaissance and Baroque Engravings, Etchings and Woodcuts*, exh. cat. (Baltimore Museum of Art/Pennsylvania State University Press, 2002); Peter Parshall and Rainer Schoch, *Origins of European Printmaking: Fifteenth-Century Woodcuts and Their Public*, exh. cat. (National Gallery of Art/Yale University Press, 2005); Jan van der Waals, *Prenten in de Gouden Eeuw: van kunst tot kastpapier*, exh. cat. (Museum Boijmans Van Beuningen/Waanders Drukkers, 2006); Larry Silver and Elizabeth Wyckoff, eds., *Grand Scale: Monumental Woodcuts in the Age of Dürer and Titian*, exh. cat. (Davis Museum and Cultural Center, Wellesley College/Yale University Press, 2008); David Areford, *The Viewer and the Printed Image in Late Medieval Europe* (Ashgate, 2009); Ad Stijnman, *Hochzeit von Bild und Buch: Anfänge der Druckgraphik 1420–1515 aus den Beständen der Herzog August Bibliothek*, exh. cat., Wolfenbütteler Hefte 26 (Herzog August Bibliothek/Harrassowitz Verlag, 2009). Landau and Parshall (above), pp. 359–60, offer a summary of the omnipresence and myriad uses of early prints. For the difficult topic of prices, see Jo Kirby, Susan Nash, and Joanna Cannon, eds., *Trade in Artists' Materials, Markets, and Commerce in Europe to 1700* (Archetype, 2010)

2. The Art Institute's impression of Albrecht Dürer's *Adam and Eve* (fig. 70), for instance, was signed by Parisian print dealer Pierre Mariette (1634–1716) on the verso.

3. David Areford, "Multiplying the Sacred: The Fifteenth-Century Woodcut as Reproduction, Surrogate, Simulation," in *The Woodcut in Fifteenth-Century Europe*, Studies in the History of Art 75, Center for Advanced Study in the Visual Arts, Symposium Papers 52, ed. Peter Parshall (National Gallery of Art/Yale University Press, 2009), pp. 119–53.

4. These outlines could serve explicitly as frames in an attempt to make printed art that could rival panel painting. Landau and Parshall (note 1), pp. 81–82, suggest that the common wide floral borders in fifteenth-century prints in particular were a perspectival device to ready prints for display as ersatz paintings.

5. In the Art Institute's *Stonyhurst Hours* manuscript (2009.653) is a *Visitation* miniature in which the Virgin's face and pregnant abdomen have been visibly rubbed or perhaps moistened with kisses. In a woodcut *Virgin* on page 26 of Placidus Sprenger's *Devotional Album* (see pp. 93–95), all but a fragment of the cloth is torn away from the embossed seal above the image.

6. See Suzanne Karr Schmidt, "Marginal Devotions: A Newly Acquired Veronica Woodcut," *Yale University Art Gallery Bulletin* (2002), pp. 99–104, for a sudarium print used for grammar notes and meditative doodling.

7. This text may have been composed by Pope John XXII (r. 1316–34). The annotator in fact cites only the second half of the original prayer, *De Sancta Cruce* (On the Holy Cross), part of the indulgenced recitation of the Hours of the Cross, which could be found in many books of hours.

8. British Museum, W.1.133; Biblioteca Palatina, Parma, O.n.21766 (untrimmed).

9. Blockbooks used wooden letters carved within the block rather than movable type, even though they postdate Gutenberg's invention. Nigel Palmer, "Woodcuts for Reading: The Codicology of Fifteenth-Century Blockbooks and Woodcut Cycles," in Parshall, ed. (note 3), pp. 92–117. A complete copy of the book at the Herzog August Bibliothek in Wolfenbüttel, Germany, has been digitized: http://diglib.hab.de/inkunabeln/6-xylogr-1/start.htm.

10. A wood carving tool in a pile of excrement served as Flötner's signature in some woodcuts. See Jeff Persels and Russell Ganim, eds., *Fecal Matters in Early Modern Literature and Art: Studies in Scatology* (Ashgate, 2004).

11. These are in the Rothschild Collection at the Musée du Louvre, Paris; the Harvard Art Museums, Cambridge (G2936); and the British Museum, London (1852, 0424.3-4; 1852, 0424.2 has Italian text added to its banderole).

12. This book page comes from a portfolio of sixteenth-century illustrated book leaves chosen by Max Geisberg in 1937, for which at least one copy of each book must have been sacrificed to the edition (fifty with English introductions and fifty in German). The Saint Otilia leaf discussed above came from a similarly plundered compendium of fifteenth-century illustrated book pages assembled in 1929 by W. L. Schreiber.

13. The British Museum owns a set on pasteboard (1896,0501.381.1–51) with the letterpress verses printed below the cards pasted onto the cards' versos.

SINGLE- AND MULTI-SHEET PRINTS

For the *Saint George*, see p. 190, nn. 43, 45.

9. Walter J. Karcheski, Jr., *Arms and Armor in the Art Institute of Chicago* (Art Institute of Chicago/Little, Brown and Company, 1995), pp. 28–29, 70–71.

10. Madeleine Viljoen, "To Print or Not to Print? Hendrick Goltzius's 1595 'Sine Baccho et Cerere Frigit Venus' and Engraving with Precious Metals," *Zeitschrift für Kunstgeschichte* 74 (2011), pp. 45–76. The Goltzius Dudley plate is in the Birmingham Museum of Art and is illustrated in Huigen Leeflang, *Hendrick Goltzius (1558–1617): Drawings, Prints and Paintings*, exh. cat. (Rijksmuseum/Waanders Publishers, 2003), cat. 22.

11. The chalk drawing on which these are based, which Dürer executed at an Augsburg Reichstag in 1518, leaves the design of the pin blank, but in the Germanisches Nationalmuseum painting, the half-length Madonna appears in gold. See Kurt Löcher, ed., *Die Gemälde des 16. Jahrhunderts* (Germanisches Nationalmuseum/Verlag Gerd Hatje, 1997), pp. 213–15.

12. The titulus sign usually bears the label INRI (the faux honorific title "Jesus of Nazareth, King of the Jews" given him by Pontius Pilate), or IHS (the Christogram, Christ's Greek name: iota eta sigma).

13. De Bry was a goldsmith and an engraver, and this set has been traditionally interpreted as a pattern for metalwork. No actual copies in metal are known, however, and as the writing is readable, the prints were clearly not pulled from the tazze themselves.

14. The Art Institute owns one such late print (1989.172). Annibale Carracci engraved this so-called *Tazza Farnese* with a round wreath showing Bacchus and fauns celebrating.

15. Larry Silver and Elizabeth Wyckoff, eds., *Grand Scale: Monumental Woodcuts in the Age of Dürer and Titian*, exh. cat. (Davis Museum and Cultural Center, Wellesley College/Yale University Press, 2008). See Horst Appuhn and Christian van Heusinger, *Riesenholzschnitte und Papiertapeten der Renaissance* (Uhl, 1976), p. 88, for decorated cloister ceilings; Alison Stewart, "Woodcuts as Wallpaper: Sebald Beham and Large Prints from Nuremberg," in Silver and Wyckoff (above), pp. 72–84, esp. 76–77, for furniture; and Jan van der Waals, *Prenten in de Gouden Eeuw: van kunst tot kastpapier*, exh. cat. (Museum Boijmans Van Beuningen/Waanders Drukkers, 2006), cat. 177, for a large sea trunk decorated with broadsides.

16. They are: *The Presentation in the Temple* (1955.1232); *The Flagellation of Christ*, in a rare first state (1950.1673); *The Crucifixion* (1950.1674); and *The Resurrection* (1950.1675; cat. 12). None have the framing components. The series decorated the predella of at least one large altarpiece and, pasted onto canvas or panel, may also have served for personal devotion. Suzanne Boorsch, "Framed in Fifteenth-Century Florence," *Metropolitan Museum of Art Journal* (2002), pp. 35–40; Landau and Parshall (note 1), pp. 12–13, 28–89, for prints
